Wendy,

The Watershed Engineering Division has reviewed Tom Winkley's 100-year floodplain boundary as delineated on the attached drawing and does accept the floodplain boundary as accurate. Mr. Winkley's floodplain delineation is based upon actual field survey information and is more accurate than the aerial survey used in the new Onion Creek study. The field survey information, when used in the floodplain model, provides a floodplain boundary slightly changed from the new Onion Creek study.

This information has been submitted to FEMA for inclusion into the new Onion Creek study.

I hope this explanation suffices. Please let me know if you have any questions or need more information.

Sincerely,

Ray
