

APPENDIX D: BICYCLE NETWORK FACILITY RECOMMENDATIONS

BICYCLE FACILITY SELECTION METHODOLOGY

Bicycle facility selection for the recommendations in this Plan was done by using a combination of methodologies. Field analysis, availability of alternate routes, potential future roadway changes, and public input influenced facility recommendations. A main influence on the recommendation was the Federal Highway Administration (FHWA) "Design Bicyclist" methodology (Chapter 2, pages 84-86), which identifies traffic operation characteristics that influence the preferred facility.

First, roadway cross sections were evaluated to determine how the existing roadway could be modified to provide space for the bicycle facility. This evaluation incorporates traffic characteristics, such as on-street parking, traffic volume and speed. Secondly, if an existing roadway could not feasibly accommodate a bicycle facility given the FHWA methodology, potential alternates were identified and evaluated. Future road projects were also considered, including the prospect of widening a road based on the AMATP 2025 Plan, proposed Capital Improvement Projects, and where growth might put pressure on roadway expansion.

Also, facility recommendations identified by the Street Smarts Task Force represent the preferred routes and recommendations by the bicycling community in Austin. Therefore, these recommendations were considered heavily when determining the recommendations in this Plan.

Lastly, public input received during the planning process was also heavily considered and incorporated into the recommendations of this Plan.

It is important to note that the recommended facility listed in these tables is the most *feasible* recommendation, given the factors described above, and not necessarily the most conservative for each roadway. Conditions will change over time affecting the recommended bicycle facility. If the opportunity arises to install a more conservative bicycle facility, per FHWA and/or staff recommendation, then that shall be the recommended facility. For FHWA recommendations, roads in the state highway system are identified as Class A bicycle facilities and the facility recommendations in Appendix D should reflect Class A facility recommendations.

Recommendations in Appendix D will be implemented only after further technical and feasibility analysis is completed by all City departments and other governmental agencies to determine the potential impact to transportation and public safety response as a whole. If it is determined that a specific bicycle facility is infeasible due to its impact on transportation and public safety response as a whole, an alternate route or facility should be pursued and shall follow amendment process if criteria for amendment is met.

For recommendations out of the City of Austin Jurisdiction, the City of Austin will work with other jurisdictions to promote a regional bicycle network.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.

Width of recommended facility is as recommended by the FHWA Bicycle Facility Selection Tables on pages 85-87. Recommendations to be implemented only after further technical and feasibility analysis is completed to determine impact to transportation as a whole; if determined infeasible an alternate route or facility should be pursued.

*Cross section for future roads is based on AMATP proposed cross section or extension of existing roadway.
