

To whom it may concern,

Sustainable Waves~ Solar Powered Sound & Staging is a mobile sound and stage production company. We have a live music permit on Cesar Chavez on the east side of Austin, TX. Ten of our neighbors have signed a letter in support of our permit and live music events. Our intentions are to produce community based events at our space 3-4 times per year. Our permit is to provide live music until 12 midnight. We will do everything we can to please our neighbors. We'll keep the music at a reasonable volume and use our line array PA system to minimize the distance that the sound travels. Our sound system has a computer program that allows us to angle our sound system to reduce the distance the sound travels. Our intention is to create events that are welcoming to the community and to provide a venue that will build relationships between people. We hope our neighbors will come to our space to celebrate with each other and enjoy live music generated from 100% pollution free energy.

Thanks for your support
