## Additional Backup Information

This amendment will authorize Black & Veatch to perform the construction and warranty phase engineering services for construction of the Jollyville Transmission Main from Water Treatment Plant 4 to the Jollyville Reservoir. This project will include approximately 36,300 linear feet of 84-inch pipe to be constructed via tunnel. The project is located in northwest Austin beginning at Water Treatment Plant 4, southwest corner of FM 620 and Bullick Hollow Road, and terminating at the Jollyville Pump Station and Reservoir, 7329 McNeil Drive, Austin, Texas, 78729.

The proposed construction and warranty phase engineering services include, but are not limited to shop drawing review and approval, full time field representation, inspection and review of construction work, change management and approval, testing and disinfection, and startup, commissioning, and warranty assistance. As stated in the February 25, 2010 Request for Council Action (RCA), staff anticipated returning to Council for an amendment authorizing additional funding for these services with the completion of design.

This project is scheduled to be constructed and in use by spring of 2014.
