Additional Backup Information

The Uniform Plumbing Code provides a national standard for plumbing installations. The proposed ordinance amends the currently adopted local amendments to create consistency within the technical codes and to improve water conservation and create a positive environmental impact.

Highlights of the local amendments include:

- Creating consistency with installation of water heaters.
- Adding an exception for the installation of hose bibbs on rain water.
- Prohibiting the use of potable water for once through cooling of commercial equipment.
- Elevator discharge containment system for improved environmental protection.
- Requiring self closing metered faucets to improve water conservation.
- Water closets average consumption of water of a maximum of 1.28 per flush.

These changes in the Local Amendments have no impact on housing affordability.
