## Additional Backup Information

The parties involved in this interlocal agreement engage in prescribed fire planning and implementation, for the maintenance or enhancement of watersheds and wildlife habitat, or the reduction of hazardous fuels for the protection of life, property and natural resources from wildfires and other "all hazard" incidents. This reinstitutes the previous interlocal that expired. It is to the mutual advantage of the Texas Forest Service and the City of Austin to coordinate efforts for prevention, training for, detection, and suppression of wildfires; and management and training for prescribed fires and other incidents to improve efficiency and effectiveness.

The purpose of this agreement is to provide a framework of cooperation for each of the parties to provide mutual cooperation and assistance for prescribed fire management, fire prevention, fire preparedness; and for emergency management and assistance on "all Hazard" incidents such as wildfire and floods. Management of prescribed fire, Wildland fire, or other emergency incidents on one or another party's land could require greater resources and expertise than that party can handle. It is in the best interest of each party to have available service from the other party to aid and assist them in management of, preparation for, and response to these incidents. It will also provide

for technical support and training; and will allow each party to request equipment, personnel and appropriate personal safety items as necessary to ensure safety of employees participating in interagency incident management efforts. Parties understand that resources available from the City of Austin under this agreement are limited to the resources of the Austin Water Utility, Wildland Conservation Division.
