Recommendation for Council Action (Purchasing)

Austin City Council

Item ID:

28870

Agenda Number

37.

Meeting Date:

December 12, 2013

Department:

Purchasing

Subject

Authorize award and execution of a 12-month requirements service agreement with IMS INFRASTRUCTURE MANAGEMENT, to provide pavement data collection services for the Public Works Department, in an amount not to exceed \$108,750, with three 12-month extension options in amounts not to exceed \$119,350 for the first extension option, \$108,750 for the second extension option, and \$119,350 for the third extension option, for a total contract amount not to exceed \$456,200.

Amount and Source of Funding

Funding in the amount of \$90,625 is available in the Fiscal Year 2013-2014 Operating Budget of the Public Works Department. Funding for the remaining 2 months of the original contract period and extension options is contingent upon available funding in future budgets.

Fiscal Note

There is no unanticipated fiscal impact. A fiscal note is not required.

MBE / WBE:

This contract will be awarded in compliance with City Code Chapter 2-9C (Minority-Owned and Women-Owned Business Enterprise Procurement Program). No subcontracting opportunities were identified; therefore, no goals were established for this solicitation.

Additional Backup Information

The contract is to provide Pavement Data Collection (PDC) services on city maintained roads. The PDC contract will involve collection of pavement condition data including the visual pavement cracking distresses and the ride condition of the roadway network. The collected Pavement Condition Data is necessary for evaluating the current pavement conditions and prioritizing annual and long-term maintenance needs for the City of Austin's roadway network.

An automated data collection vehicle, equipped with lasers to collect the roughness of pavement and cameras to collect the pavement images is used to collect the information. The automated crack detection software employed as part of the data processing system identifies and summarizes the distress information. The collected data is automatically recorded. The new data collection does not take into consideration the previous data collected.
