### Additional Backup Information

This contract is for a system-wide distribution pole audit for Austin Energy. The contractor will conduct an audit of approximately 165,000 utility poles. The audit includes field inspections and inventory of the communication company attachments to Austin Energy's infrastructure, specifically distribution type electrical poles.

Telecommunication, cable and data providers are allowed access to Austin Energy's infrastructure in order to disseminate subscriber services to the public. This audit will confirm the attachment ownership, the number of unaccounted for attachments and the attachments currently in violation. Completion of a comprehensive pole audit will provide Austin Energy with the ability to identify and catalog the thousands of communication company attachments present on utility infrastructure. Additionally, accurate pole attachment counts may positively affect annual billed revenues as the amount of annual billing may not be accurately reflecting what is actually affixed to AE poles.
