

ZONING CHANGE REVIEW SHEET

CASE NUMBER: C14H-2014-0011

HLC DATE:

August 25, 2014

PC DATE:

APPLICANTS: Gary Gustovich and Susan Barr, owners

HISTORIC NAME: Stacy-Tate House

WATERSHED: Blunn Creek

ADDRESS OF PROPOSED ZONING CHANGE: 1705 Travis Heights Boulevard

ZONING FROM: SF-3-NP to SF-3-H-NP

SUMMARY STAFF RECOMMENDATION: Staff recommends the proposed zoning change from single family residence, neighborhood plan (SF-3-NP) combining district to single family residence – Historic Landmark – neighborhood plan (SF-3-H-NP) combining district zoning.

QUALIFICATIONS FOR LANDMARK DESIGNATION:

ORDINANCE NUMBER:

CASE MANAGER: Steve Sadowsky

PHONE: 974-6454

NEIGHBORHOOD ORGANIZATION: South River City Neighborhood Association

BASIS FOR RECOMMENDATION:

Architecture:

The house is an excellent and intact, if relatively modest example of Spanish Colonial Revival architecture, which was very popular throughout much of the Southwest in the 1920s and 1930s. Austin has surprisingly few examples of this architectural style; much greater numbers are found in San Antonio, Dallas-Fort Worth, and El Paso in Texas; it was a very popular style in Arizona and California. Spanish Colonial Revival was one of the period styles that became popular in the first decades of the 20th century, hearkening back to more traditional styles of the past. Residential architecture in the United States had been dominated by the ornate Victorian-era styles of the late 19th century, including Queen Anne. The Arts and Crafts movement in art and architecture at the turn of the 20th century was, in part, a reaction to the fussiness of Victorian architecture, as well as to the loss of craftsmanship evident in house building and architectural design with the availability of mass-produced architectural details made possible by the industrial revolution and the

advent of rail transport. The proponents of the Arts and Crafts movement bemoaned the loss of the evidence of the handiwork of individual craftsmen in residential design; bungalows represented a style and scale that embodied the ideals of the Arts and Crafts movement. The period revival styles of the 1920s represent the same desire to return to more traditional architectural roots; Colonial Revival (generally of the English colonies on the East Coast) became the most popular residential design in this country in the first half of the 20th century, and there were many variants, including Tudor Revival, Dutch Colonial Revival, and Spanish Colonial Revival. These period revival styles took their cues from architectural features that typified early architecture (Spanish Colonial Revival had a much greater emphasis on the use of traditional materials such as clay roofs, stuccoed walls, and tilework than any other period revival style) and applied them to a contemporary floorplan. Typically, period revival styles also took some character-defining features from their prototypes – many Spanish Colonial Revival houses have round-arched window openings, twisted columns or pilasters, and shallow eaves.

The Stacy-Tate House embodies all of the character-defining features of the Spanish Colonial Revival as it was interpreted in Austin – hollow clay tile construction, round-arched window openings, and twisted pilasters.

Historical Associations:

The house was built in 1928 by contractor Will H. Biggs with the Stacy Realty Company, the developers of Travis Heights. It was apparently built as a spec house, and represents the desires of the developers of Travis Heights to create a middle-class neighborhood which had picturesque lots on twisting streets, all tenets of the City Beautiful Movement of the early 20th century. Due to the financial constraints of the Great Depression, this house did not sell at the time of its construction, and became a rental property. Tenants included a salesman, an insurance man, state officials, and a used car dealer. The house was actually sold, but remained a rental for its owners. Robert I. Freeman bought the house in 1944, and ran his refrigeration business from here, but he sold the property in 1947, and the house would not be owner-occupied again until 1959. Alva Tate bought the property in 1953, and moved into the house in 1959. She was a seamstress for Scarbrough's, Austin's largest department store. After Mrs. Tate's tenancy, the house was bought and sold several more times. Milton Hime, an architect, bought the house in 1988 and built the two-story addition to the rear. Several other families have lived in the house prior to the purchase of the property by the current owners.

PARCEL NO.: 03030202100000

LEGAL DESCRIPTION: Lot 9, Block 33, Travis Heights

ESTIMATED ANNUAL TAX ABATEMENT: \$5,147 (owner-occupied); city portion: \$1,442.

Historical Statement of Significance:

Formalized into a subdivision in 1913, Travis Heights was the third platted area of Austin south of the river. Building off of the lessons learned from the Swisher Addition in 1876 and the Fairview Park development in 1886, William Harwood Stacy developed Travis Heights to be comprised of mostly modest size lots to appeal to the middle class as well as a scattering of larger lots for the more affluent. This circa 1928 house, located on Lot 9 of Block 33 in the Travis Heights Subdivision, is a testament to the times in which it was constructed.

The history of 1705 Travis Heights Boulevard is indicative of human life. It is a story about diversity, inevitable life changes and finding placement. The house itself is a remarkable example of a modest single story Spanish Colonial Revival house of the Mission phase that has provided shelter to the middle class for the last 85 years.

Construction of the residence at 1705 Travis Heights Blvd started in the spring of 1928 by contractor Will H. Biggs¹ as a joint venture between the Stacy Realty Company and the Austin Real Estate & Abstract Company as a speculative development for the middle class. Property taxes for the previous year indicated the value of the property at \$310 in conjunction with lots, 2, 3, 4 and 10 of Block 33². The house was a modest two bedroom, one bathroom, 1,350 sf single story house with a rear porch and a garage off of the alley.³ As construction continued into the spring of 1929, the ownership transferred to the Austin Real Estate and Abstract Company⁴ with construction being completed later that year⁵.

The Great Depression of 1929 had catastrophic effects on this nation's economy. The unemployment rate rose from 3% in 1929 to 25% in 1933 and with more than 9,000

banks having closed, millions of people lost their life savings⁶. 'Many Texans believed the state's rural nature would insulate the region from the worst of the financial crisis'⁷ given the diverse economies at the time: a growing citrus industry in the south, cotton in the north and livestock in the west. However, as the nation's economy collapsed, it was evident that Texas would also suffer.

With the economy in a downward spiral, finding a buyer for the property at 1705 Travis Height Boulevard was an incredible challenge. The property tax evaluation dropped to \$150 (which included lots 2 & 10 of Block 33) in 1930⁸. Then in 1932, the valuation was fixed by the Board of Equalization at \$100⁹ and again in 1934, to \$50¹⁰.

For the following 5-1/2 years, the house was a rental property to a **salesman**, Wayne F. Hadley and his family; and then to an **insurance supplier** and his wife, Gordon R. Flack and Inez. Even with finding the first buyer, Dr. Frederick Eby, who was a 'professor emeritus of education at the University of Texas for 48 years who dedicated his career to the development of education and was considered the "father" of the junior college movement in Texas'¹¹, the property changed hands the following year and one more time after that until the first owner-occupied family, the Freeman's, purchased the home in 1944. After the initial sale of the house to Dr. Eby, the collected property tax could be established in conjunction with the market value at \$1,400¹².

There were four tenants in the house from 1935 until 1944, one of which was Mr. Freeman prior to his purchasing the house.¹³ The occupants' careers ranged from: Richard G Waters, Casualty Commissioner for the State Board of Insurance Commissioners who also served as the campaign manager for Jimmy Allred when he

was elected Governor of Texas in 1935; to Mr. James Beard, **a used car dealer**, his wife and child; and then Ray S. Clyde of unknown occupation.

Prior to Mr. Freeman's ownership, he was a **serviceman** with JR Reed Music Co with his wife, Pauline, who worked at the Fred Adkins store as the **shoe & hat manager**.¹⁴

After purchasing the house, Mr. Freeman ran his own business from the residence, **Bob Freeman Refrigeration**.¹⁵

In 1948, the house was sold and would not be owner-occupied again until 1959 when Mrs. Alva Tate, who had owned the house since 1953, moved in. The tenant after Mr. Freeman, Mr. Bruce K. Hallock and his wife, was another small business owner who ran **Hallock Charters** from the house.¹⁶ After moving out of the house at 1705 Travis Heights Blvd, Mr. Hallock went on to see his original tailless designed aircraft, the Road Wing, take flight and then on to become Lyndon B. Johnson's private pilot during John F. Kennedy's presidential campaign¹⁷.

The tenants proceeding Mr. Hallock's departure included **a member of the Air Force** and his wife, a **dance instructor** and a **manager at the Allen Post Co**.¹⁸ In 1959, when the owner, **Mrs. Alva Tate**, a **seamstress** at E.M. Scarbrough & Sons, who was the longest person to owner-occupy the house (18 years), moved in, the challenges of being a widow (living alone, making ends meet) were apparent in the City Directories. Other acquaintances were registered at the house during this time with a listing for 1705a appearing in the City Directory of 1963. It is believed that the garage off of the alley had been converted into a secondary dwelling unit that was used until 1984. The various tenants of 1705a Travis Heights Boulevard were stable for a handful of years and then changed on a yearly basis. Their positions in life varied from **widowers** to a **beauty operator**, an Austin **road construction laborer**, a **night attendant** at the State Hospital, and a **nurse** at Brackenridge Hospital.¹⁹

In 1977, the Newmiller's purchased the property and owned it until 1983. During this time it continued to be rented with Mrs. Newmiller, the owner and a **schoolteacher** for 43 years in New York and Texas, living in the house for just one year.²⁰ Permit history does not show when the garage was removed from the property, but the last known listing was in 1984 as vacant²¹. At this time, Drs. Joseph & June Spann, medical internists, purchased the house and lived in it until 1988. In 1988, Milton Hime, an **architect** & founding principle of Studio 8 Architects, and his wife Debra, an **AISD employee**, purchased the home and lived in it until 1994. It is during this time period, that the two story addition was added to the rear of the house. Though insignificant in size, the addition's juxtaposition offers a nice view of the Austonian downtown to the northwest and the peacefulness & solitude of the backyard to the southeast.

In 1994 the house changed hands within fourteen months from Jeff Harris's purchase to Jennifer and Ralph Janes IV who lived in it until 2001. In 2001 Christopher Wenzle owned the property for fifteen months prior to selling it to Oliver Nudd in 2002. Oliver, a semiconductor design engineer, along with his wife Maria, an **Associate Professor** at UT, Ph.D. Anthropology, and their children lived in the house until 2013 when it was then purchased by the current owners.

The house at 1705 Travis Heights Boulevard is an 85-year lifetime experience of strength, weakness and perseverance of the middle class in Austin, TX. It is a story about diversity, inevitable life changes and finding placement. While it is important not to erase the past of those who were fortunate in making successful lives for themselves and having a strong impact on the development of the city, it is also important not to disregard the lives of those who made a living wage and made the everyday possible. More importantly, during these times of strong economic growth and development, it is imperative that we keep unique structures as the one found at 1705 Travis Heights Boulevard in our vernacular.

²⁰ Polk City Directory, Austin, TX, 1983

²¹ Polk City Directory, Austin, TX, 1984

Architectural Description:

The site starts high in the southeast corner of the lot and gently slopes down to the northwest corner of the property. The footprint of the original house is square in plan with a recessed entry. The front door is north facing on a west fronting façade. The living room is just inside the front door that has a fireplace and a small set of double doors out to the south side yard. The dining room sits central to the house with a small kitchen and breakfast area just to the north side of the dining room. There is a small hall from the dining room where one accesses the bathroom and two bedrooms. The 1992 addition can be accessed through the north bedroom.

The house was built using structural hollow clay tile from the Butler Brick Company, now the Elgin-Butler Brick Company. The house is able to sit unusually low to the site due to its concrete perimeter beam, structural hollow clay tile wall construction and exterior stucco finish. Common Spanish Colonial Revival Mission phase architectural elements that include scalloped roof overhangs, slightly flared front corners of the structure and arched windows are also found on this house. The hand thickened dappled stucco finish and handmade twisting pilasters on the front façade demonstrate a high level of artistic craftsmanship that is rarely found on modest Spanish Colonial revival houses. There are a few technological innovations for a house of this era that include: not needing a prescribed square footage of crawl space venting since it vents up through the walls and out of the attic, its thermal mass and given its construction, the house is virtually fireproof.

Alterations:

Though its tenant history is long, the house has remained mostly intact including its original knob and tube wiring. The alterations that are evident include: changing the north set of exterior doors into a single door, interior closet/refrigerator niche configuration adjacent to the north exterior door, removing an interior door between the dining room and hallway, removing an interior set of doors between the living room and dining room, adding HVAC in 1984, removal of the garage off of the alley, removal of the rear porch, a 2-story rear addition in 1992, and current foundation work.

SCANNED

The property meets the following historic landmark criteria:

(i) Architecture. The property embodies the distinguishing characteristics of a recognized architectural style, type, or method of construction; exemplifies technological innovation in design or construction; displays high artistic value in representing ethnic or folk art, architecture, or construction; represents a rare example of an architectural style in the city; serves as an outstanding example of the work of an architect, builder, or artisan who significantly contributed to the development of the city, state or nation; possesses cultural, historical or architectural value as a particularly fine or unique example of a utilitarian or vernacular structure; or represents an architectural curiosity or one-of-a-kind building.

The hand thickened dappled stucco finish and handmade twisting pilasters on the front façade make this residence a one-of-a kind building. The scalloped roof overhangs, slightly flared front corners of the structure and arched windows are a recognized style of Spanish Colonial Revival architecture of the Mission phase. The structural hollow clay tile construction exemplifies a method of technological construction that allows a structure to sit low to the ground there by allowing the crawl space to vent up through the walls and out of the attic. This type of construction also makes the house virtually fireproof.

(ii) Historical Associations. The property has long-standing significant associations with persons, groups, institutions, business, or events of historical importance, which contributed significantly to the history of the city, state, or nation; or represents a significant portrayal of the cultural practices of the way of life of a definable group or people in a historic time.

Formalized into a subdivision in 1913, Travis Heights was the third platted area of Austin south of the river. Building off of the lessons learned from the Swisher Addition in 1876 and the Fairview Park development in 1886, William Harwood Stacey developed Travis Heights to be comprised of mostly modest size lots to appeal to the middle class as well as a scattering of larger lots for the more affluent.

This house was built during one of our nation's most significant financial disasters and has stood the test of time relatively untouched.

(iv) Community Value. The property has a unique location, physical characteristic, or significant feature that contributes to the character, image, or cultural identity of the city, a neighborhood, or a particular group.

The hilly terrain, non-orthogonal street designs and close proximity to central Austin make Travis Heights a unique and desirable location to live in the city.
