Additional Backup Information

This contract is for the purchase of 1,350 138kV 68-inch I-string insulators to be used by Austin Energy for re-conductor projects on Circuits 974 and 3123 and the Sprinkle Substation. The existing insulators, which are approximately 20 years old, will be replaced during the re-conductor projects. The insulators are designed to accommodate attachment points on transmission poles to support 138kV-rated transmission line wire.

During the life span of insulators, their electrical characteristics slowly deteriorate. After 20 years, while the insulators can still support the transmission wire, there is a higher risk of a "flashover" causing a failure in the event of a storm or other adverse conditions.
