Additional Backup Information

This RCA is for Council to consider approval of the update to the Austin Energy Resource, Generation and Climate Protection Plan. The attached, updated Plan will take effect immediately upon passage and includes long-range planning through 2024.

The Plan is a resource planning tool that brings together demand and energy management options over the planning horizon. Updating the Plan, which occurs every two years as directed by Council, involved extensive analysis of the expected risks, costs and opportunities to meet the future demand for electricity services. The Plan also benefited from substantial input from citizens, customer groups, utility advisory commissions, a Council-appointed task force and City Council. The goals outlined in the document are based on Austin Energy's current understanding of technology and of national, state and local energy policies. Execution of individual elements of the Plan will be subject to affordability impacts and Council approval.
