Austin's Urban Canopy: 30%

Condition: 37% Good, 62% Fair/Poor*

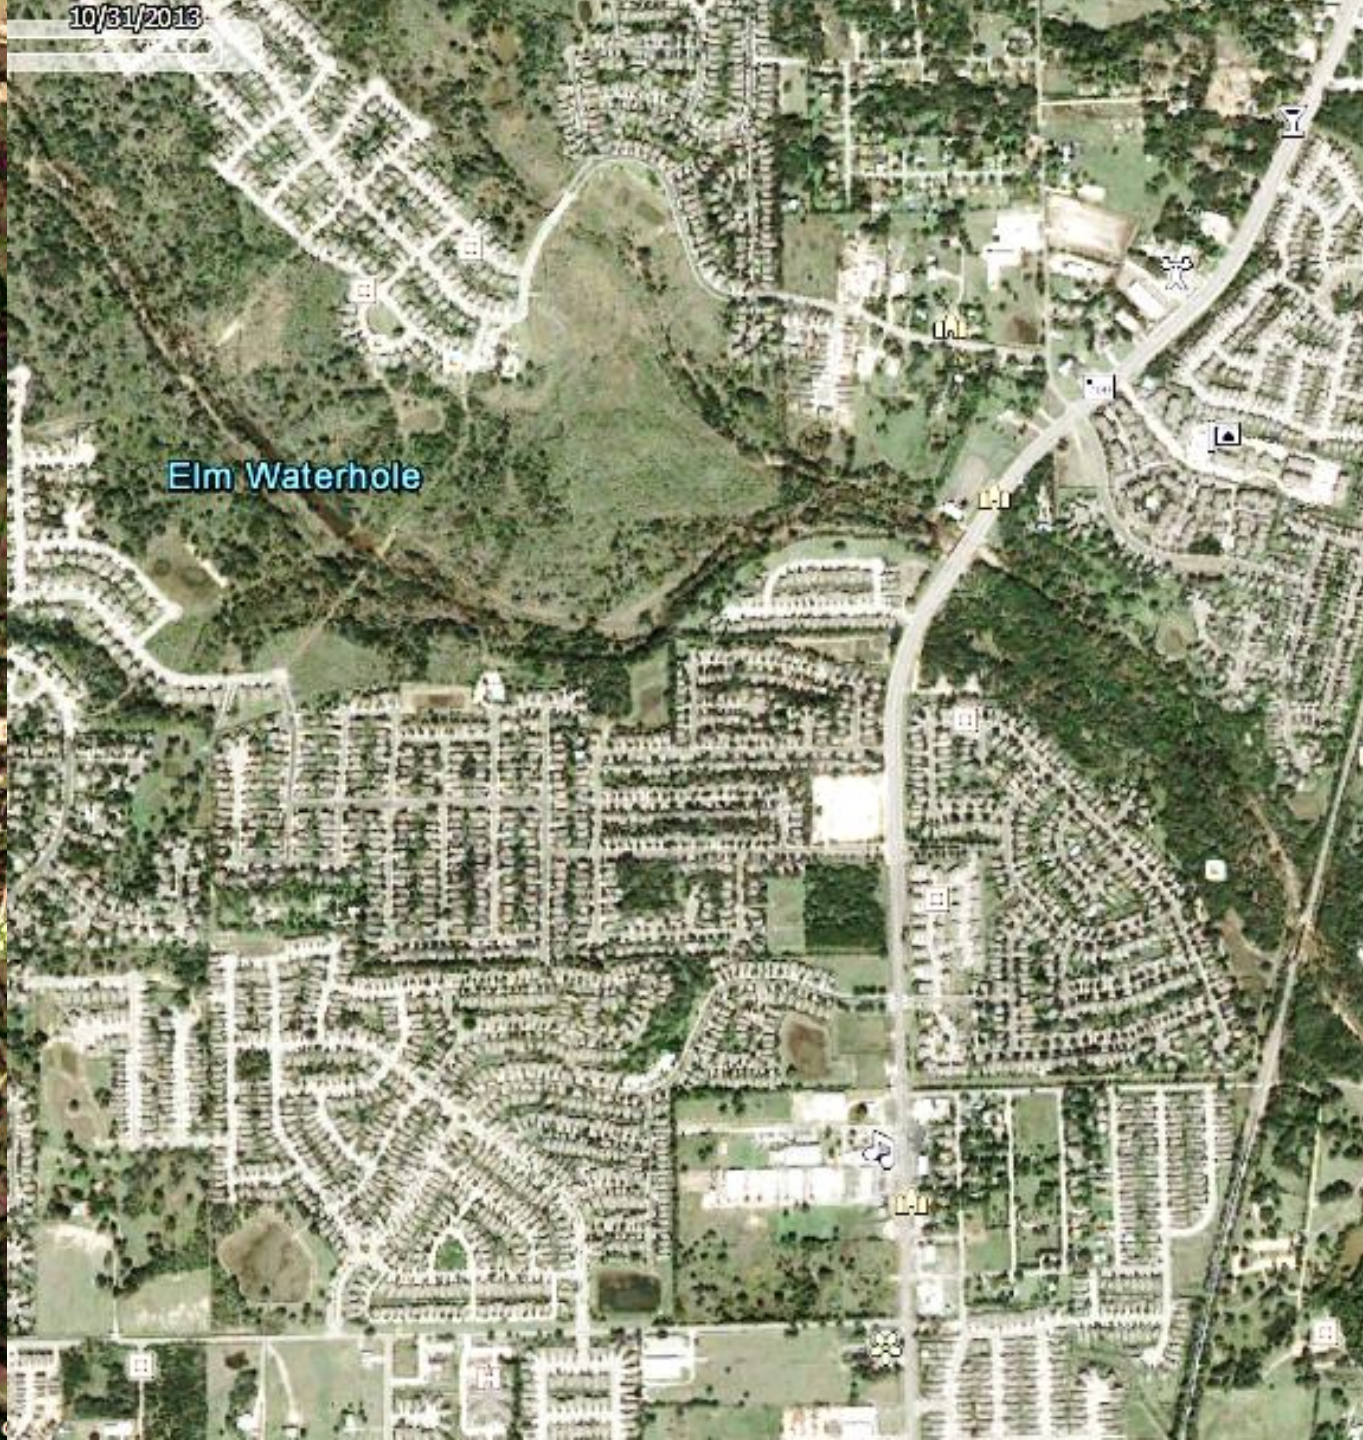

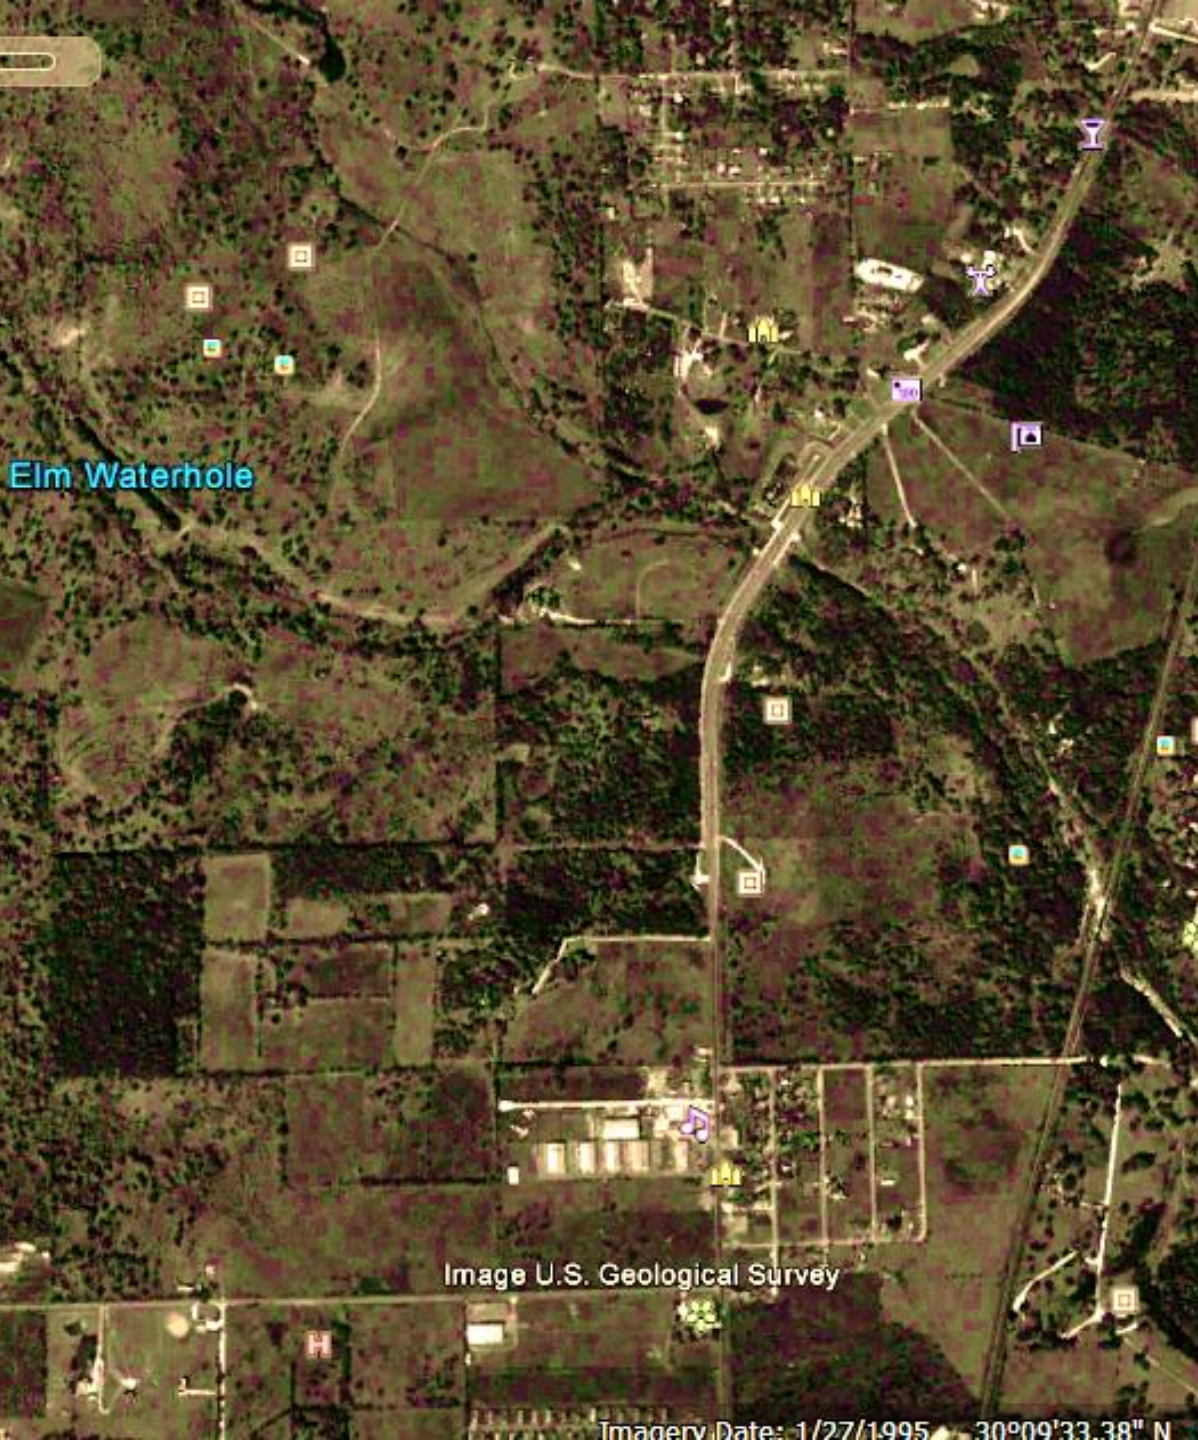

We rely on Urban Canopy for:

- Air purification
- Ozone reduction
- Swamp Cooling
- Water Purification
- Carbon Sequestration
- Lowered Energy Use
- **Austin's unique sense of place**

An aerial photograph of a suburban neighborhood in Texas. The landscape is characterized by a high density of trees, many of which appear dead or dormant, showing brown and tan foliage. The trees are interspersed among residential houses with light-colored roofs. Winding asphalt roads cut through the neighborhood. In the upper left corner, there is a large, flat, light-colored area that appears to be a dry field or a large parking lot. The overall scene conveys the impact of a severe drought on the local environment.

Historic Drought: 0.5 billion trees lost in Texas.
Austin: ?
