мве/wве: This contract wil Соde Chapter Enterprise Procu		

The contract is for technical support, maintenance and license renewals for GE Proficy Globalcare software. This software is used in the daily operations of Austin Water treatment facilities including treatment plants, water distribution facilities and wastewater collection facilities. This software is part of the Supervisory Control and Data Acquisition (SCADA) system required to monitor and control the process equipment at these facilities. It is a critical system for Austin Water operations at these facilities and is used 24 hours a day, seven days a week, 365 days a year.

City staff from Austin Water and the City's Computer and Technology Management Department have been working with GE since October 2014 to develop a new support contract to replace the previous support agreement. However an agreement wasn't reached until now due in part to the complexities of changes in GE software licensing and support pricing structure. As this software is highly specialized and proprietary, Austin Water is currently not able to upgrade any of the software or get technical support, increasing the risk of potential problems in operating the SCADA systems.

The proposed contract, when adjusted for timing and changes in the number of licenses now needed, represents an approximate 62% increase in cost over the previous agreement. However, given that the proposed agreement provides for an additional 44 % more licenses than the previous agreement, staff believes that this support contract reflects a reasonable cost for the anticipated services to be provided.

GE Intelligent Platforms owns all intellectual property related to the GE Proficy Globalcare software and is the manufacturer and sole distributor of this proprietary software and doesn't have any resellers or allow others to provide associated services to users.
