i. For each acre of land in a critical water quality zone that a Landowner dedicates in fee simple to the City or a Municipal Utility District or another entity approved by the Watershed Protection Department director in fee simple, the Landowner may transfer 20,000 square feet of impervious cover to an uplands zone. Land dedicated under this section may also be credited toward the parkland dedication requirements of Chapter 25-4, Article 3, Division 5 (*Parkland Dedication*).

ii. For each acre of land in a water quality transition zone that a Landowner leaves undeveloped and undisturbed and does not include in impervious cover calculations elsewhere, the Landowner may transfer 20,000 square feet of impervious cover to the uplands zone.

iii. For each acre of land in a water quality transition zone that a Landowner uses for a golf course or other recreational use, restores using predominantly native trees and grasses, and provides a plan for minimizing the use and effect of pesticides, herbicides and fertilizers, the Landowner may transfer 17,000 square feet of impervious cover to an uplands zone.

- 1                   iv. For each acre of land in an uplands zone that is located in the buffer  
2                   zone of a critical environmental feature and that a Landowner leaves  
3                   natural and undisturbed, the Landowner may transfer 20,000 square  
4                   feet of impervious cover to an uplands zone. The buffer area may be  
5                   included in the net site area calculations for the uplands zone.
- 6                   v. For each acre of land in an uplands zone that a Landowner uses for  
7                   wastewater irrigation, restricts against future development, and  
8                   leaves in a natural state, other than for necessary irrigation lines and  
9                   tailwater control berms, the Landowner may transfer 20,000 square  
10                  feet of impervious cover to an uplands zone.

13               the transfer.
- 14                   i. A Landowner may transfer development intensity to a receiving  
15                   tract that is within the same watershed classification as the  
16                   transferring tract. This limitation does not apply if the transferring  
17                   and receiving tracts are both owned by the Landowner and are  
18                   separated only by property that is also owned by the Landowner.
- 19                   ii. A Landowner must concurrently plat the transferring and receiving  
20                   tracts and must transfer all development intensity at that time.
- 21                   iii. A Landowner must note the development intensity transfer on the  
22                   plats of the transferring and receiving tracts, in a manner determined  
23                   by the Director of Development Services Department.
- 24                   iv. A Landowner shall file a restrictive covenant approved by the City  
25                   Attorney in the Travis County Deed Records. The restrictive  
26                   covenant shall run with the transferring tract and describe the

## EXHIBIT J

### Stormwater, Drainage and Water Quality and Environmental Protection Requirements

1. The District will own, operate, and maintain the District's drainage infrastructure until full-purpose annexation of the District by the City.
2. Each water quality or detention pond which contains all or a portion of runoff water from industrial, commercial, or mixed-use development (as defined by the City) will be owned, operated, and maintained by the District or the owner of the property on which the pond is located.
3. The Developer and the District each agree to fully comply with the City's ordinances, regulations, and procedures related to drainage, as defined by the City Code. The Developer's construction plans will be consistent with this commitment.
4. The District and the Developer each agree to be good stewards of the environment relating to air quality, water quality, trees, buffer zones and greenbelt areas, critical environmental features, soils, waterways, topography, and the natural and traditional character of the land located within the District.
5. Unless otherwise specified herein or as modified by the PUD, the District and Developer each agree to fully comply with the City's ordinances, regulations, and procedures related to water quality and environmental preservation and protection, as defined by the City Code, as to the portion of the Land owned by it.
6. In all phases of development, the Developer agrees to:
  - a. except for Land contained within the Sun Chase South Preliminary Plan (C8J-2008-0176), design modified channels based on geomorphic stability for full build-out hydrology. This design requires a series of nested channels as shown on Exhibit J-1 that includes a bankfull (1 yr. return interval) channel within the floodplain (100 yr) channel with distinct connections to an inset floodplain terrace. The top width to depth ratio of the bankfull channel shall be designed per accepted geomorphic principles (e.g., Osterkamp et al. 1983 or Osborn and Stypula 1987). The channel longitudinal profile (slope) shall be designed and demonstrated by calculation to be non-erosive via permissible shear or velocity calculations that consider the particle size of the native soil comprising the channel. If topographic and/or development constraints make the design of a non-erosive natural channel infeasible, the use of armoring (such as with geotextiles) will be allowed.
  - b. restore floodplain, including through the use of native prairie grass species and riparian trees species, in order to provide an enhanced public amenity, minimize impacts of urbanization, and reduce costs of future, long-term maintenance of the floodplain;
  - c. provide water quality controls superior to those otherwise required by Austin City Code for those areas set forth on the attached Exhibit J-2 (Proposed Bio-Filtration Ponds) and Exhibit J-3 (Headwater Buffer Plan);
  - d. provide volumetric flood control detention in accordance with the volumetric detention analysis prepared by Carlson Brigrance & Doering, Inc. dated October 24, 2011, which has been reviewed and approved by the City;

d. provide protection of headwaters of unclassified waterways for those areas depicted on the attached **Exhibit J-3** (Headwater Buffer Plan);

e. prohibit, through Restrictive Covenants, the uses listed on **Exhibit J-4** which the City and the Developer agree may contribute to air or water quality pollutants; and

f. cluster impervious and disturbed areas in an environmentally sensitive manner as approved by the City in conjunction with its review and approval of the Preliminary Plans.

7. The District (as to the portion of the Land owned by the District) and the Developer (as to the portion of the Land owned by the Developer) each agrees to comply with the integrated pest management plan approved by the City in conjunction with the Approved Preliminary Plans.

8. The Developer agrees to provide pervious paving for all pedestrian sidewalks, trails and walkways included in the OA Amenities.

  - a. dedicate right-of-way for Pearce Lane, Wolf Lane and Sun Chase Parkway (Arterial C/Four Daughters under the CAMPO 2030 Plan) in accordance with the Phasing Agreement between the Developer and Travis County approved in conjunction with the approval of the Preliminary Plans;
  - b. fund the construction of improvements to Sun Chase Parkway (Arterial C/Four Daughters under the CAMPO 2030 Plan) and improvements to intersections of internal roadways with Pearce and Wolf Lanes in accordance with the Phasing Agreement between the Developer and Travis County, Texas recorded under Document No. 2010040073, Official Public Records of Travis County, Texas, approved in conjunction with the approval of the Preliminary Plans;
  - c. provide bicycle facilities and access for pedestrians and bicyclists to schools, parks and other destinations as shown on the attached **Exhibit H-2** (Trail & Accessibility);
  - d include sidewalks and bike lanes (i) generally meeting the design specifications established for typical arterial and collector street cross-sections under the City's Transportation Criteria Manual and (ii) generally complying with National Association of City Transportation Officials ("NACTO") and American Association of State Highway and Transportation Officials ("AASHTO") standards, including signage and markings, but not including signalization, as follows:
    1. for arterial streets, five-foot bike lanes and six-foot sidewalks;
    2. for residential collector roads (60/40), five-foot designated bike lanes on either side of the two 13-15 foot driving lanes, for a total of 40-44 feet of pavement, and five-foot sidewalks;
    3. for neighborhood collector roads (64/44), five-foot bike lanes segregated by pavement striping located two feet from the two 13-15 foot driving lanes, for a total of 40-44 feet of pavement, and five-foot sidewalks;
    4. for commercial collector roads (70/44), five-foot bike lanes on either side of the three 11-foot driving lanes (consisting of two traffic lanes with a continuous left-turn lane), for a total of 43-44 feet of pavement, and sidewalks as designated by the Commercial Design Standards, Subchapter E;
    5. for local streets, four foot sidewalks only.

All applicable requirements will be shown on the construction plans, which are subject to the City's and the County's approval under Title 30.

3. To reserve a ten-acre transit center site at a location to be mutually agreed upon by the Developer and the City during the PUD process. This site may be purchased by the City or, at the City's option, another governmental entity designated by the City by written notice to the Developer at any time prior to the date the first of the District or one of the Other Southeast Travis County Districts is annexed for full purposes by the City.

## Sun Chase PUD Tree Planting Detail and Specifications

### Tree Stock

All required tree plantings shall use native Central Texas tree stock.

### Soil Volume

All required trees shall be planted with adequate soil volume in accordance with the following soil volume standards:

- Small trees (less than 30 ft. mature height): minimum of 600 cubic feet soil volume.
- Medium trees (30 to 50 ft. mature height): minimum of 1,000 cubic feet soil volume.
- Large trees (greater than 50 ft. mature height): minimum of 1,500 cubic feet soil volume.

Soil depth shall be three feet for all three tree sizes. The length and width of the planting area may vary to achieve the required soil volume. For areas where the soil volume is under pavement, the subgrade may not be compacted.

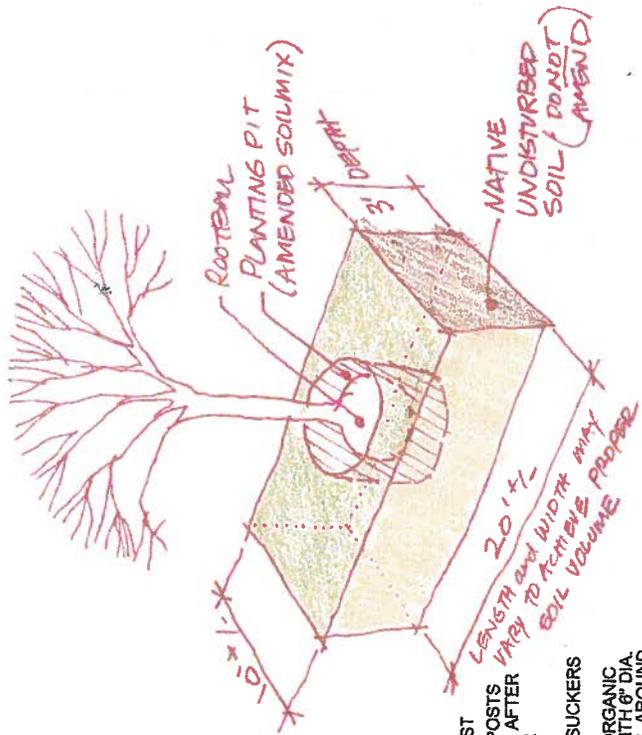

### Soil Specifications

The soil in the planting pit shall be composed of 4 parts soil mixed with 1 part compost, by volume. The compost shall meet the definition of compost as defined by TxDOT Specification Item 161. The soil may be from naturally occurring native soils or amended within the tree planting pit in order to achieve the following requirements:

- Shall be free of trash, weeds, deleterious materials, rocks, and debris.
- 100% shall pass through a 1.5-inch (38-mm) screen.
- Shall be a loamy material that meets the requirements of the table below in accordance with the USDA textural triangle. Soil known locally as "red death" is not an allowable soil. Textural composition shall meet the following criteria:

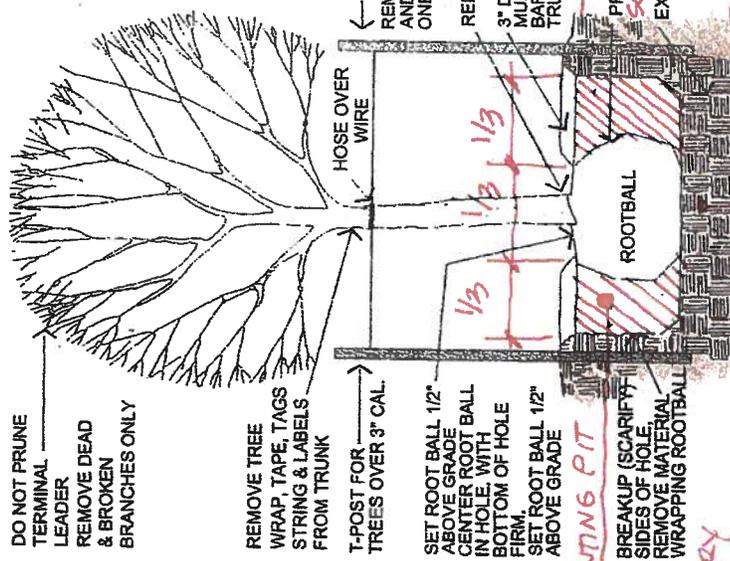

Textural Class	Minimum	Maximum
Clay	5%	50%
Silt	10%	50%
Sand	15%	67%

- Topsoil salvaged from the existing site may often be used, but it must meet the above standards. An owner/engineer may propose use of onsite salvaged topsoil which does not meet the soil texture class required above by providing a soil analysis and a written statement from a qualified professional in soils, landscape architecture, or agronomy indicating the onsite topsoil will provide an equivalent growth media and specifying what, if any, soil amendments are required.
- Soil amendments shall be worked into the existing onsite topsoil with a disc or tiller to create a well-blended material.
