Additional Backup Information				

The Colorado Street project from 7th to 10th street is the final remaining section of the Colorado Street Reconstruction project, which focused on reconstruction of Colorado from 3<sup>rd</sup> to 11<sup>th</sup> streets. The reconstruction of the 3<sup>rd</sup> through 7th street section of Colorado began in 2012 and was completed in 2013. The 10th through 11th Street block of Colorado was completed in 2012 as part of the Governor's Mansion improvement project. City Council initially approved the construction contract for this section in September 2017.

This request for additional authorization is needed for excavation, handling, disposal of contaminated soil discovered near the 900 block of Colorado Street, a modified storm drain manhole, additional four inch diameter water line pipe, additional street reconstruction, additional barricades, and traffic control modifications. The contaminated soil was discovered while excavating for the proposed storm drain line. The deep storm water manhole was revised to address conflicts with exiting utility lines whose actual elevations were only verifiable during the construction phase. The additional street reconstruction consists of adding curb bulb outs along Colorado Street at 10th Street. Coordination efforts are ongoing with businesses and residents affected by the project. The contract also provides for stopping work during special events.

This change order has been approved by the City's Change Control Committee. The Change Control Committee was established to comply with Council Resolution No. 20120126-048, which required the establishment of consistent criteria and process to evaluate contractual changes for all contracts administered by the Capital Contracting Office. The Change Control Committee is comprised of management-level subject matter experts.

The project limits are Colorado Street from 7th Street to 10th Street. The work on this final section of the project includes Great Streets Elements (18 foot sidewalks, trees, benches, bicycle racks, and trash receptacles), street lights, new curb and gutter, 1,895 linear feet of water line, 970 linear feet of wastewater line, 12 wastewater manholes, 1,435 linear feet of storm sewer line, and full depth street reconstruction.

Executing this construction change order in a timely matter is critical to completing the installation of utilities and the overall project. The project is expected to be complete by August 2017.

This project is located within zip code 78701(District 9). This project is managed by the Public Works Department.

Muniz Concrete & Contracting Inc., is located in Austin, Texas.
