

# Connection Test ATX

**City of Austin, Telecom & Regulatory Affairs**

# Background and Purpose

Connection Test ATX is a speed test that Austin residents can utilize via SpeedUpAmerica's platform. This tool surveys respondents via wireless and wireline connections to test their speed, both upload and download, and advertised speed they are paying for internet service. This data can be mapped to a census block using an HTML code, by entering an address or using a browser location - using gateway code.

This tool works in tandem with other community engagement initiatives to generate input to support Austin's Legislative Agenda for the upcoming State Legislative Session this spring. It also helps City to advance an understanding of Austin community members' needs, and advances an opportunity for community engagement specific to digital access needs.

Currently, we are in the process of galvanizing community and technical support, with the next step of working with community hackers to develop a technical framework for coding the tool.

[About SpeedUpAmerica](#)

[FAQ](#)

### Your Results

Download Speed 33.33 Mbps

Upload Speed 61.11 Mbps

Ping 16 ms

### Comparison

Your internet speed is **faster than 48.23%** of other ho  
internet connections in your area.

# Next Steps?

1. Any champion that wants to bring this tool to Austin (or Texas).
2. Looking for developers who want to advance the open-source project <https://github.com/Hack4Eugene/SpeedUpAmerica>
3. Use this tool to empower Outreach and Data Gathering Campaigns already in motion.

# ON THE GROUND TRUTH

Why does broadband matter?

“I work from home, and don’t feel like I’m getting the internet speed I pay for. Is there a way for me to check my *real* internet speed?”

“It takes me over an hour to reach my doctor. Is telehealth an option for me?”

## Schools close due to the coronavirus, many U.S. students face a digital “homework gap”
