Boards and Commission Action To be reviewed by the Austin Airport Advisory Commission on November 14, 2006

Prior Council Action May 25, 2006-Consultant selection approved

The Austin-Bergstrom International Airport (ABIA) opened in May 1999 with a high-grade security system which provided greater than required coverage. Since that time, security technology has improved, airport facilities have expanded, and security requirements have increased in response to the September 11, 2001 terrorist attacks. These events have resulted in the existing system, and many of its components, needing to be replaced to provide the level of service, capacity, or ease of maintenance required to meet the airport's current and future needs.

The consultant selected for the ABIA Security System Upgrade Project has completed a recommendation report and administrative authorization is pending for commencement of design services. This amendment will provide additional services for reconfiguration of the dispatch center workstations and additional security measures for the baggage handling system. It will also provide a blast analysis of the baggage screening rooms and construction phase services.

Reconfiguration of the dispatch center workstations was identified as a needed improvement during the preliminary phase survey. This will provide better coverage and efficiency and will improve the workstations from an ergonomic standpoint.

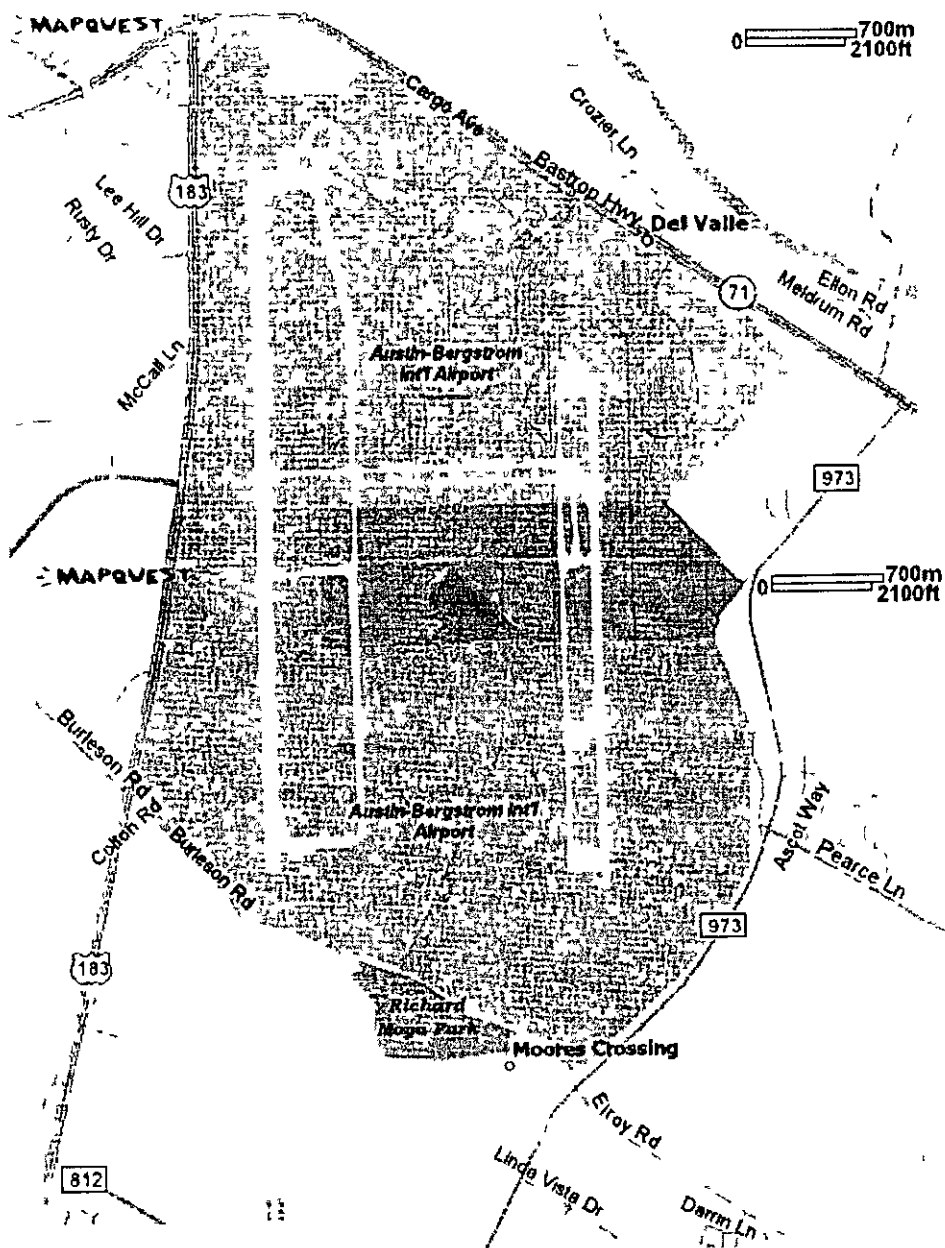

Additional CCTV cameras and integration with the existing camera/security system for the baggage handling system will enhance security and safety for airport occupants.

A blast analysis of the baggage screening rooms will provide qualitative information on the ability of these rooms to withstand explosions and will allow the Department of Aviation to access what improvements, if any, should be implemented.

The original authorization was for preliminary and design phase services, and did not cover the cost of construction phase services
