Pertussis Data Profile, Travis County^{1,2}

2013 Pertussis Case Counts

Total	117	100.0%
Confirmed	61	52.1%
Probable	56	47.9%

Gender Distribution

Male	62	53.0%
Female	55	47.0%

Median Age	5 Years
Age Range	27 Days - 61 Years

Age Distribution

Under 1 Year	33	28.2%
1-4 Years	25	21.4%
5-9 Years	23	19.7%
10-19 Years	28	23.9%
20-29 Years	2	1.7%
30-39 Years	3	2.6%
40-49 Years	2	1.7%
50-59 Years	0	0.0%
60 Years and Older	1	0.9%

Data presented in this report includes both confirmed and probable cases of Pertussis reported in Travis County. This report includes completed case investigations only. All 2012 and 2013 data are preliminary. The data provided for 2012 was generated on February 13, 2013 and the data provided for 2013 was generated in August 14, 2013.

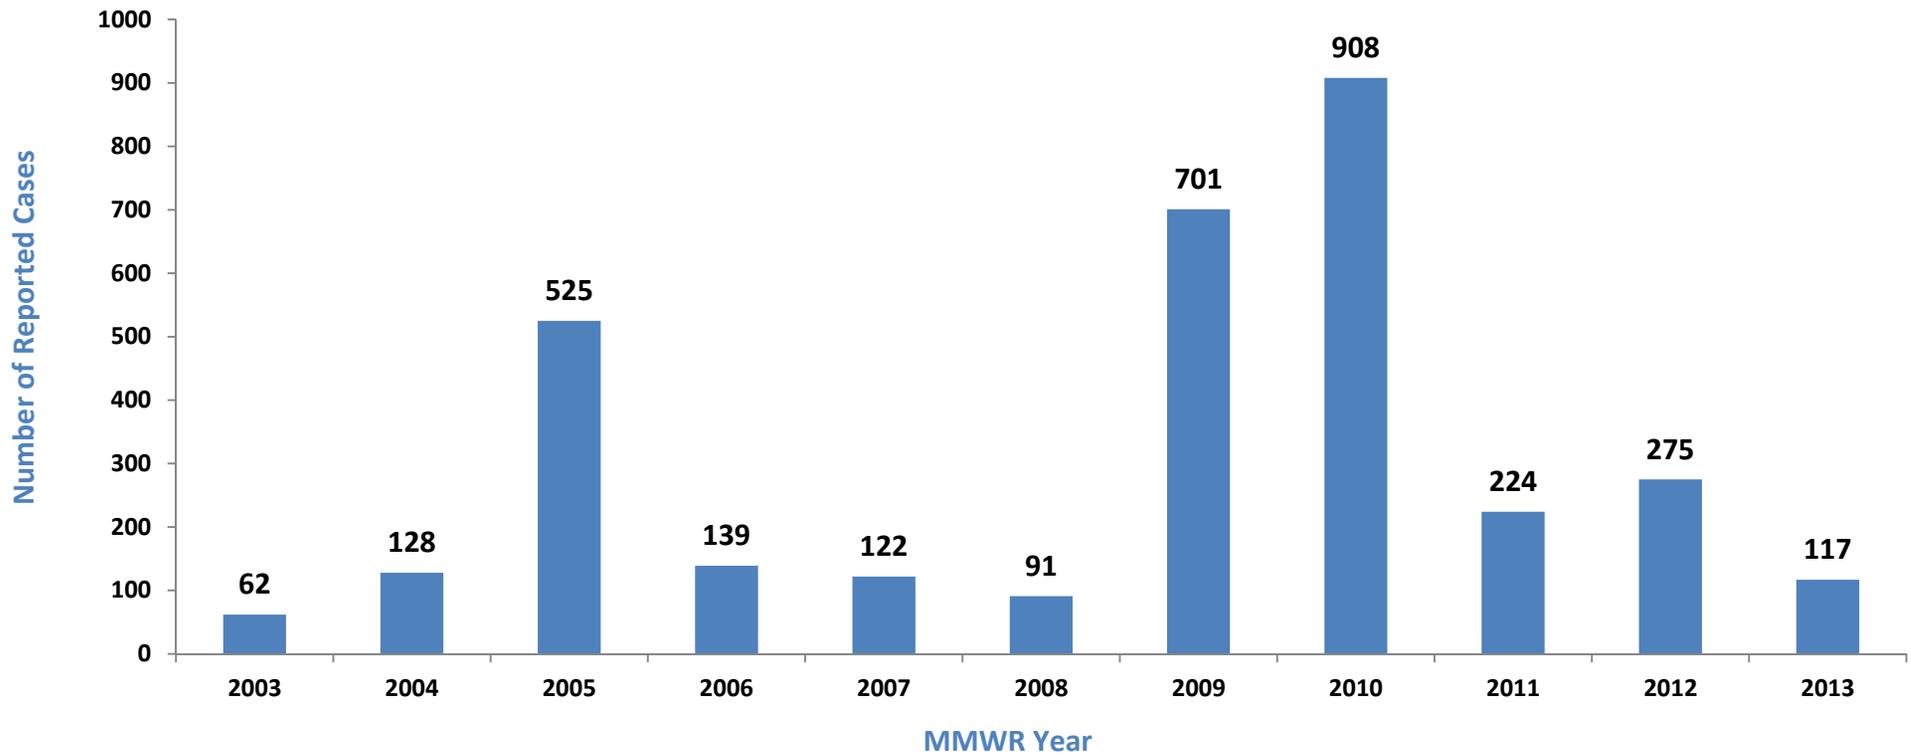

The number of Pertussis cases varies over time in Travis County (Figure 1). In 2009 and 2010, there was a definitive increase in the incidence of Pertussis in Travis County. Some of the increase resulted from advances in laboratory testing, the Pertussis case definition, and the process of case investigations. Since 2010, the Texas Department of State Health Services modified the Pertussis case definition and guidelines specific to case investigation. While there has been a recent overall decline in reported Pertussis cases in Travis County; it continues to be a public health concern. The majority of reported Pertussis cases correlate to the school year (Figure 3). Most reported cases of Pertussis occur in elementary age children and younger (Table 1). Public health is especially concerned with cases of Pertussis in young children, especially those under one year old. Approximately 67% of the cases reported for 2013 are less than eight years of age. The last reported Pertussis death in Travis County was in an infant in 2003.

Map 1. Travis County Reported Cases of Pertussis 2013^{1,2}

Data presented includes both confirmed and probable cases of Pertussis reported in Travis County. This map only includes cases in which investigations are complete, any pending reports and investigations for Pertussis are not included. All 2013 data are preliminary. Data in this map were generated on August 14, 2013.

Unable to map cases with Post Office Boxes. Four reported cases are not included in the map above.

This map does NOT reflect the location of where individuals acquired their infection. This is a map of the residence of the cases at the time of report.

This map has been produced by the Austin/Travis County Health and Human Services Department for the sole purpose of geographic reference. No warranty is made by the City of Austin regarding specific accuracy or completeness.

-
- ⁴ Travis County Population Estimates for 2003-2009 and Travis County Population Projections for 2011-2012 obtained from the Texas Department of State Health Services Center for Health Statistics and the Texas State Data Center, Population Estimates and Projections Program. Travis County Population for 2010 obtained from Census 2010, from the U.S. Census Bureau.
- ⁵ Population Estimates and Population Projections are produced by different methods. If data are to be used in trend analysis, or other comparative treatments, unexpected results may be obtained if data from both estimated and projected series are used.
- ⁶ Data by month of report may not include all cases for that MMWR year. All data are pulled by MMWR year and not calendar year. As a result, there are some instances in which cases are reported with a MMWR year in one year but the actual report was received the following calendar year. Consequently, the annual totals may not equal the exact total number of cases when each month's totals are summed.
- ⁷ When the number of reported cases is less than 20, rates may not be considered reliable. Rate calculations for 2013 will be provided at the completion of the year.
