

GREEN DOORS

HOMES THROUGH COMMUNITY PARTNERSHIP

Opportunity Mapping:
Greater Socio-Economic
Equity Thru Data

Presentation Flow

Agenda

- Opportunity Framework
- Central Texas Opportunity Maps
- Applying Opportunity Maps
- Q&A

Critical Questions

- What is opportunity mapping?
- What does it tell us at different levels of analysis? E.g., individual vs. systemic?
- Why does it matter? I.e., what problem is it trying to help us solve?

What is opportunity mapping?

- GIS mapping research tool used to understand the dynamics of "opportunity" within metropolitan areas
- An analysis of multiple socio-economic indicators to create a comprehensive opportunity index
- Breaks census tracts into quintiles to distinguish between various opportunity levels
- Requires assessment of local indicators of opportunity
- Developed by the Kirwan Institute and implemented in over 25 different regions across US

What is opportunity mapping?

- <u>Basic Premise</u>: residents of a metropolitan area are situated within an interconnected web of opportunities that shape their quality of life
- Where you live fundamentally shapes your life prospects
- While individual characteristics matter, so does access to opportunity

Old Real Estate Motto - Location, Location, Location!

What is opportunity mapping telling us?

- Depends....on the level of analysis
 - ✓ Individual vs. institutional vs. structural vs. global
- What does it tell us about the web of opportunity for a child living off Rundburg Lane vs. Tarrytown?
- What does it tell us about residential and school segregation in different parts of Austin?

Income and asset inequality, as well as resource allocation, have a geographic footprint

Why does it matter?

- Access to opportunity is a determinative driver of life outcomes <u>and</u> <u>location</u> – i.e., where you live – shapes that access
- Everyone should have fair access to the critical opportunity structures needed to succeed in life

If you care about socio-economic equity, you care about access to opportunity

Green Doors' Opportunity Mapping Initiative

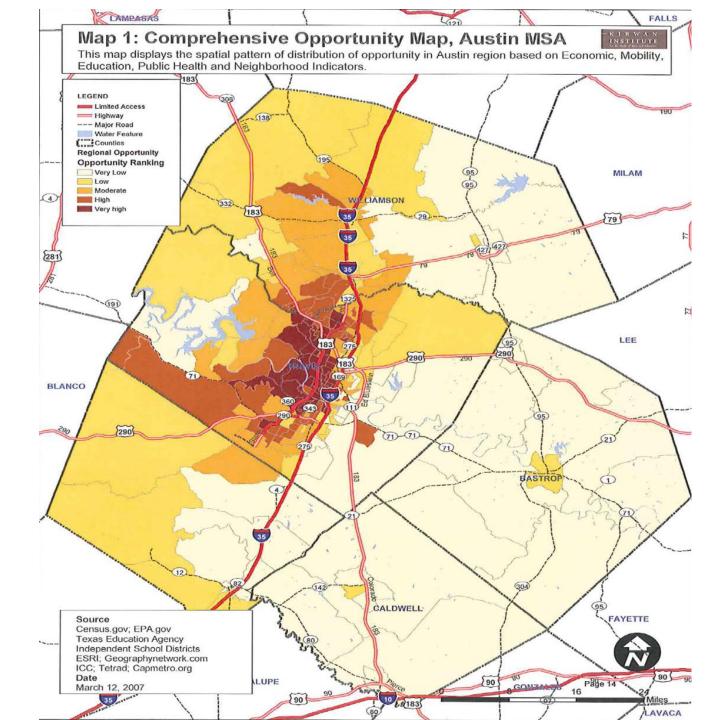

- Mapping initiative focused on how opportunity is spatially distributed in Central Texas
- Opportunity in terms of housing, public health, public education, and economic mobility
- Partnership with Kirwan Institute
- Launched in Summer 2006
- 15 collaborating organizations

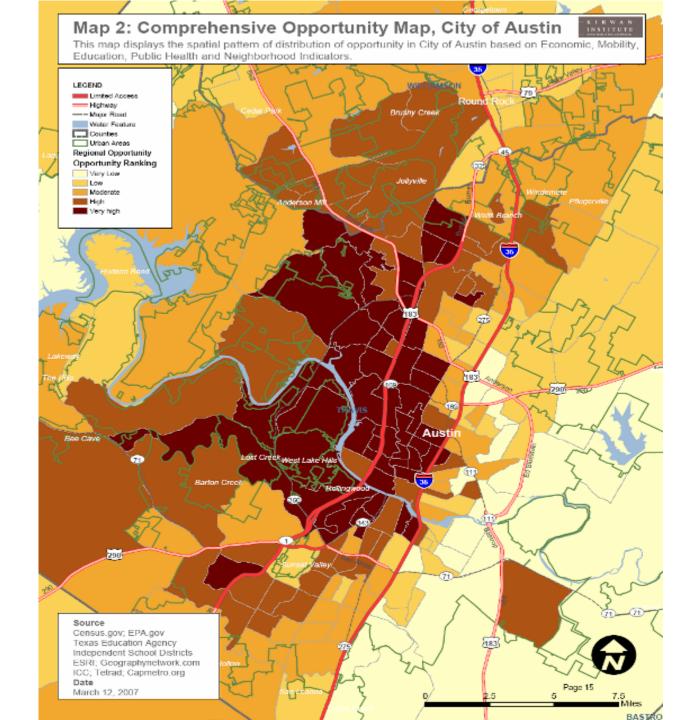

2006 Opportunity Indicators

EDUCATION	ECONOMIC	MOBILITY & TRANSPORTATION	HEALTH & ENVIRONMENT	NEIGHBORHOOD QUALITY
School Poverty Teacher Experience Student/ Teacher Ratio Math & Reading Scores Student Retention	Unemployment Dependence on Public Assistance Proximity to Employment Ratio of jobs to residents Job growth trends	Commute Time Access to public transit stops Frequency of public transit service	Proximity to toxic waste Access to parks and open space Proximity to health care facilities and physicians Access to grocery stores Insurance access	Neighborhood poverty rates Housing vacancy rates Crime rates Home ownership Median income Home values

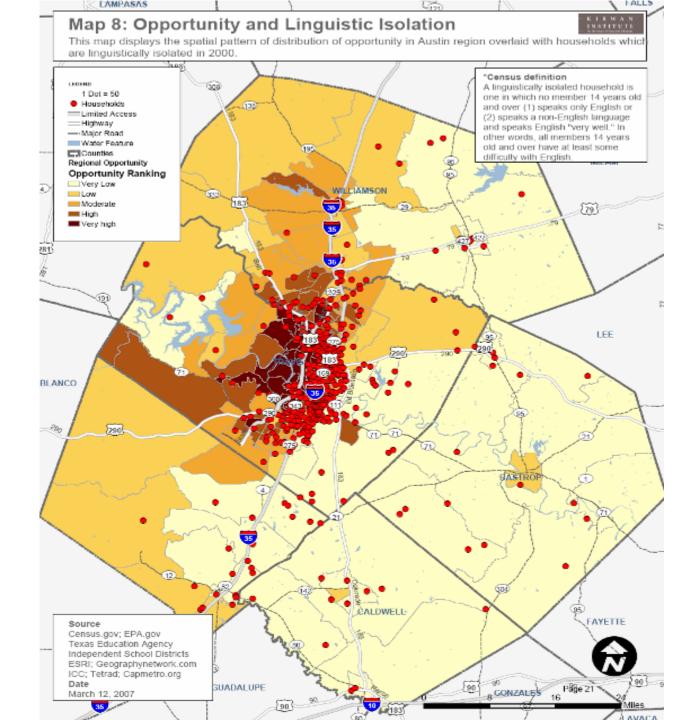

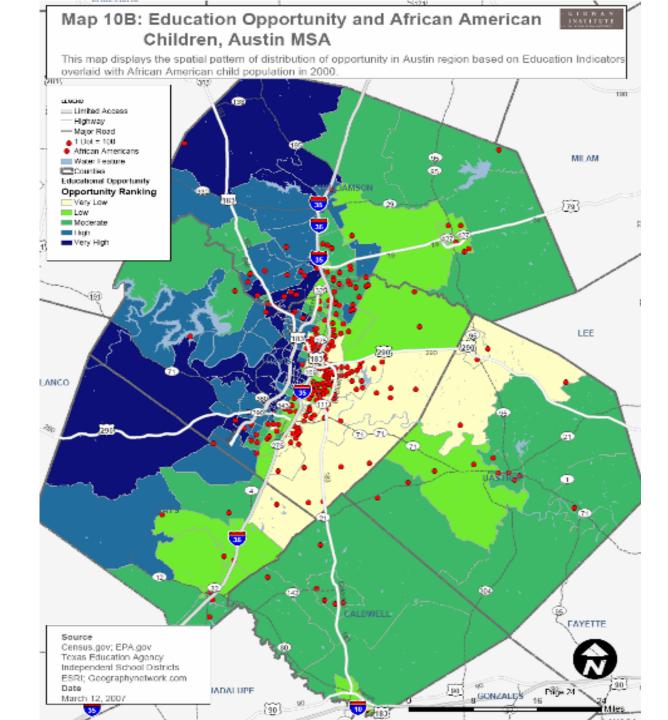

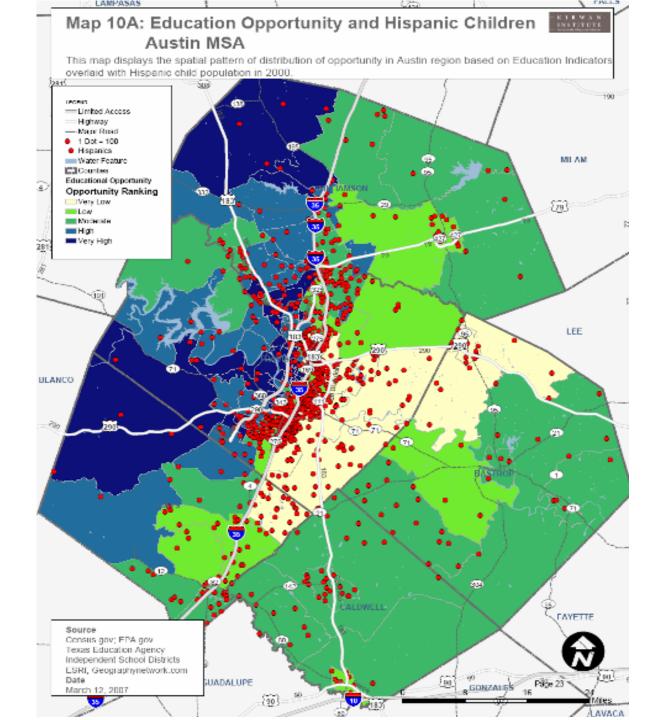

What did the 2006 maps tell us?

- Confirmed what most folks already knew/suspected
- Austin's "Crescent of Inequality"
- Notable differences between urban and rural contexts
- Disproportionate negative impact on communities of color, especially African American & Latino children

2012 Opportunity Indicators

Education

- Adult Educational Attainment
- Student Poverty
- Student/Teacher Ratio
- School Reading Proficiency Rate
- School Math Proficiency Rate
- High School Graduation Rate
- Enrollment Rate

Economics & Mobility

- Unemployment Rate
- Jobs Within 5 Miles
- Mean Commute Time
- Transit Access
- Median Household Income

Housing & Environment Conditions

- Neighborhood Poverty Rate
- Vacancy Rate
- Proximity to Parks
- Proximity to Toxic
 Release Sites
- Proximity to Brownfields
- Crime Index
- Food Deserts
- Proximity to Health Care Facilities

See map handouts...

What do the 2012 maps tell us?

- Austin's "Crescent of Inequality" is still very stark
- Opportunity appears to be accruing even more so in the western parts of the city and region
- Disproportionate negative impact on communities of color, especially African American & Latino children

How have maps been used in other communities?

- Allocating money for affordable housing in high opportunity areas
- Assisting voucher holders with residential searches
- Targeting "adopt-a-zip code" program efforts
- Prioritizing transportation investments

How should we think about using them?

- Understanding and communicating about the opportunity landscape
- Community goal setting
- Siting resources, investments, and programming
- Policy analysis and review

Prospective applications for 2012 Central Texas maps

- City of Austin: using maps as part of AHFC's scoring criteria for its affordable housing investments (<u>current</u>)
- HACA: sharing opportunity maps with voucher-holders & landlords
- Travis County: using maps to inform social service and affordable housing investments
- CAMPO: using maps to inform transportation infrastructure investments
- CapCOG: using maps as part of regional AI study

Other local possible applications

- City of Austin (Capital Planning Office): using maps as part of evaluation criteria for city infrastructure investments
- Identify 10 worst census tracts/neighborhoods in Austin (for opportunity) and target resources more strategically
- Democratizing the data should allow public entities, community members, and others to apply in a myriad of ways currently not considered?
