

Non-Radioactive Hazardous Materials Route Designation Study

Narrowing Down the Candidate Roadway Network

Process of Disqualifying Roads from Consideration

1. Major roads in CAMPO's Travel Demand Model (TDM) network served as the base **candidate roadway network**.
2. Roadways with **legal restrictions to commercial truck traffic** were disqualified from the candidate network.
3. Bridges and roads with **weight limits** were also disqualified for safety reasons.
4. Stretches of roadways with **low vertical clearance** were located and disqualified from the candidate network.
5. Stakeholder Working Group members identified roads that are too **narrow**, **winding**, or in a condition **unsuitable** for NRHM transport.
6. More roadways will be disqualified as the project proceeds and the **risk factors** are taken into consideration.

Candidate Roadway Network - Disqualified Roads
