

At a minimum, site plans for new on-site sewage facilities must include the following:

- a. The property's legal address.
- b. The outline of the property giving dimensions of the property lines. Include a direction arrow pointing north.
- c. The location and dimensions of all existing and proposed improvements such as buildings, swimming pools, driveways and other paved areas, retaining walls or grade cuts, and patios and decks.
- d. Existing, proposed, or abandoned wells (including geothermal wells) within 150 feet of the proposed OSSF.
- e. The location of existing and proposed private potable and non-potable water lines, such as landscape irrigation lines and swimming pool recirculation and supply lines.
- f. Clearly indicate the location of all trees within the vicinity of the OSSF components on the plans.
- g. The location of all easements such as utility, electrical, drainage, etc.
- h. The location of the nearest public road including the name of the road.
- i. The location of any creeks, dry washes, drainage ditches, ponds, lakes, streams, etc.
- j. The locations of the proposed OSSF and if applicable the existing OSSF.
- k. The location of the profile holes.
- l. One foot or two foot elevation contours for the areas extending 25 feet upslope and downslope of the disposal area, with one foot elevation contours throughout the extent of the disposal area.
