**Additional Backup Information**

The Planning Commission initiated a code amendment on August 25, 2015, to clarify development standards for the neighborhood plan garage design tool. The garage design tool is part of a package of optional design and infill tools that are presented to neighborhoods during the neighborhood planning process. The tool requires that a garage not be closer to the front lot line than the front façade of the principle structure, and may not exceed 50% of the width of the principal structure.

Staff has interpreted “principal structure” to include a house and attached garage, which allows for a garage that is 1/2 of the total house and garage façade. This was not the intent of the garage placement design tool. The intent was to allow up to 1/3 of the total house and garage façade. The proposed amendment would clarify the original intent of the design tool.
