9 zone.
- 10 iii. For each acre of land in a water quality transition zone that a

## **EXHIBIT J**

### **Stormwater, Drainage and Water Quality and Environmental Protection Requirements**

1. The District will own, operate, and maintain the District's drainage infrastructure until full-purpose annexation of the District by the City.
2. Each water quality or detention pond which contains all or a portion of runoff water from industrial, commercial, or mixed-use development (as defined by the City) will be owned, operated, and maintained by the District or the owner of the property on which the pond is located.
3. The Developer and the District each agree to fully comply with the City's ordinances, regulations, and procedures related to drainage, as defined by the City Code. The Developer's construction plans will be consistent with this commitment.
4. The District and the Developer each agree to be good stewards of the environment relating to air quality, water quality, trees, buffer zones and greenbelt areas, critical environmental features, soils, waterways, topography, and the natural and traditional character of the land located within the District.
5. Unless otherwise specified herein or as modified by the PUD, the District and Developer each agree to fully comply with the City's ordinances, regulations, and procedures related to water quality and environmental preservation and protection, as defined by the City Code, as to the portion of the Land owned by it.
6. In all phases of development, the Developer agrees to:
  - a. except for Land contained within the Sun Chase South Preliminary Plan (C8J-2008-0176), design modified channels based on geomorphic stability for full build-out hydrology. This design requires a series of nested channels as shown on **Exhibit J-1** that includes a bankfull (1 yr. return interval) channel within the floodplain (100 yr) channel with distinct connections to an inset floodplain terrace. The top width to depth ratio of the bankfull channel shall be designed per accepted geomorphic principles (e.g., Osterkamp et al. 1983 or Osborn and Stypula 1987). The channel longitudinal profile (slope) shall be designed and demonstrated by calculation to be non-erosive via permissible shear or velocity calculations that consider the particle size of the native soil comprising the channel. If topographic and/or development constraints make the design of a non-erosive natural channel infeasible, the use of armoring (such as with geotextiles) will be allowed.
  - b. restore floodplain, including through the use of native prairie grass species and riparian trees species, in order to provide an enhanced public amenity, minimize impacts of urbanization, and reduce costs of future, long-term maintenance of the floodplain;
  - c. provide water quality controls superior to those otherwise required by Austin City Code for those areas set forth on the attached **Exhibit J-2** (Proposed Bio-Filtration Ponds) and **Exhibit J-3** (Headwater Buffer Plan);
  - d. provide volumetric flood control detention in accordance with the volumetric detention analysis prepared by Carlson Brigrance & Doering, Inc. dated October 24, 2011, which has been reviewed and approved by the City;

- d. provide protection of headwaters of unclassified waterways for those areas depicted on the attached **Exhibit J-3** (Headwater Buffer Plan);
  - e. prohibit, through Restrictive Covenants, the uses listed on **Exhibit J-4** which the City and the Developer agree may contribute to air or water quality pollutants; and
  - f. cluster impervious and disturbed areas in an environmentally sensitive manner as approved by the City in conjunction with its review and approval of the Preliminary Plans.

### \* Possible Locations For Public Art

#### Guiding Principles

Public artworks and/or artfully-crafted architectural elements (gates, bridges, walls, etc.) will be constructed by the Master Developer in order to enhance the community's public open spaces, parks, and entryways.

These will be located strategically to optimize public visibility and accessibility, and will include information about the art and the artist, at minimum.

These works will also be located so as to become distinctive, high-quality public places that will enhance the value and the identity of the community.

### **Sun Chase PUD Tree Planting Detail and Specifications**

#### **Tree Stock**

All required tree plantings shall use native Central Texas tree stock.

#### **Soil Volume**

All required trees shall be planted with adequate soil volume in accordance with the following soil volume standards:

- Small trees (less than 30 ft. mature height): minimum of 600 cubic feet soil volume.
- Medium trees (30 to 50 ft. mature height): minimum of 1,000 cubic feet soil volume.
- Large trees (greater than 50 ft. mature height): minimum of 1,500 cubic feet soil volume.

Soil depth shall be three feet for all three tree sizes. The length and width of the planting area may vary to achieve the required soil volume. For areas where the soil volume is under pavement, the subgrade may not be compacted.

#### **Soil Specifications**

The soil in the planting pit shall be composed of 4 parts soil mixed with 1 part compost, by volume. The compost shall meet the definition of compost as defined by TxDOT Specification Item 161. The soil may be from naturally occurring native soils or amended within the tree planting pit in order to achieve the following requirements:

- Shall be free of trash, weeds, deleterious materials, rocks, and debris.
- 100% shall pass through a 1.5-inch (38-mm) screen.
- Shall be a loamy material that meets the requirements of the table below in accordance with the USDA textural triangle. Soil known locally as "red death" is not an allowable soil. Textural composition shall meet the following criteria:

<b>Textural Class</b>	<b>Minimum</b>	<b>Maximum</b>
Clay	5%	50%
Silt	10%	50%
Sand	15%	67%

- Topsoil salvaged from the existing site may often be used, but it must meet the above standards. An owner/engineer may propose use of onsite salvaged topsoil which does not meet the soil texture class required above by providing a soil analysis and a written statement from a qualified professional in soils, landscape architecture, or agronomy indicating the onsite topsoil will provide an equivalent growth media and specifying what, if any, soil amendments are required.
- Soil amendments shall be worked into the existing onsite topsoil with a disc or tiller to create a well-blended material.
