

MOTION SHEET

I move to amend Item 28 as follows:

BE IT FURTHER RESOLVED:

The City's resiliency hub effort should include not only the necessary facilities planning, but also communications, personnel, and process planning to ensure:

- Hub personnel and processes are in place to operate the facilities with appropriate logistical coordination with local community leaders/groups, non-profits and businesses. Processes must be in place to ensure resiliency hubs have access to food, water, medical personnel and supplies, internet service, transportation to and from facilities, and other basic needs as appropriate.
- Clear communications planning for the activation and operation of resilience hubs in a disaster to serve the communications needs of 1) City and County leaders, Staff and first responders, 2) community organizations, media, volunteers, and people who need access to the hub. Communications are critical related to facility capacity, and availability of supplies and services, and need to reflect the dynamic and changing conditions during a disaster. Communications should be available to people in their native language and should be delivered in a

means that reaches those most affected by a disaster.

- The resilience hub assessment and recommendations should have the most vulnerable and affected community's needs at their core. To serve this purpose, the City Manager should consult the Urban Sustainability Directors Network's (USDN) Resilience Hubs Guidance and Analysis Tools.
