Higher regulations will elevate the market price even more and limiting austins full capacity to Grow, the less houses they are, the more expensive it is and Austin now cannot fullfil the job-market

27 days ago

Glad to see the reduction in amendments.

28 days ago

New single family, two family, and town houses that meet the 2021 IRC building, mechanical, and plumbing provisions will allow City codes to align with Strategic Housing Blueprint goals instead of having to meet UPC and UMC standards. The 2021 International Existing Building Code should be adopted by reference so that emergency repair, annual permit, and alterations can be less costly.
