

EMS - Fleet Maintenance Performance

Description This table contains data on maintenance of the department response fleet – ambulances, command trucks, and utility vehicles. It includes the number of vehicles due for preventative maintenance each month, and the percentage that are serviced. The data is broken out by the three vehicle types in addition to describing overall performance.

About the vehicle types:

- Ambulances are our primary response vehicles. They are designed to transport patients to hospitals.
- Command trucks are multi-purpose vehicles used by Commanders to supervise day-to-day operations in the field.
- Utility vehicles are Chevy Tahoes or Ford Explorers used by a variety of units, such as Community Health Paramedics, Division Chiefs, and others, to support field operations.

Data Source Data is provided by the City of Austin Fleet Services department, and verified by the ATCEMS Fleet Manager.
