Pertussis Data Profile, Travis County^{1,2}

2013 Pertussis Case Counts

Total	296	100.0%
Confirmed	140	47.3%
Probable	156	52.7%

Gender Distribution

Male	144	48.6%
Female	152	51.4%

Median Age	5 Years
Age Range	19 Days - 76 Years

Age Distribution

Under 1 Year	70	23.6%
1-4 Years	70	23.6%
5-9 Years	61	20.6%
10-19 Years	60	20.3%
20-29 Years	10	3.4%
30-39 Years	10	3.4%
40-49 Years	7	2.4%
50-59 Years	5	1.7%
60 Years and Older	3	1.0%

Data presented in this report includes both confirmed and probable cases of Pertussis reported in Travis County. This report includes completed case investigations only. All 2013 data are preliminary and was generated on January 8, 2014.

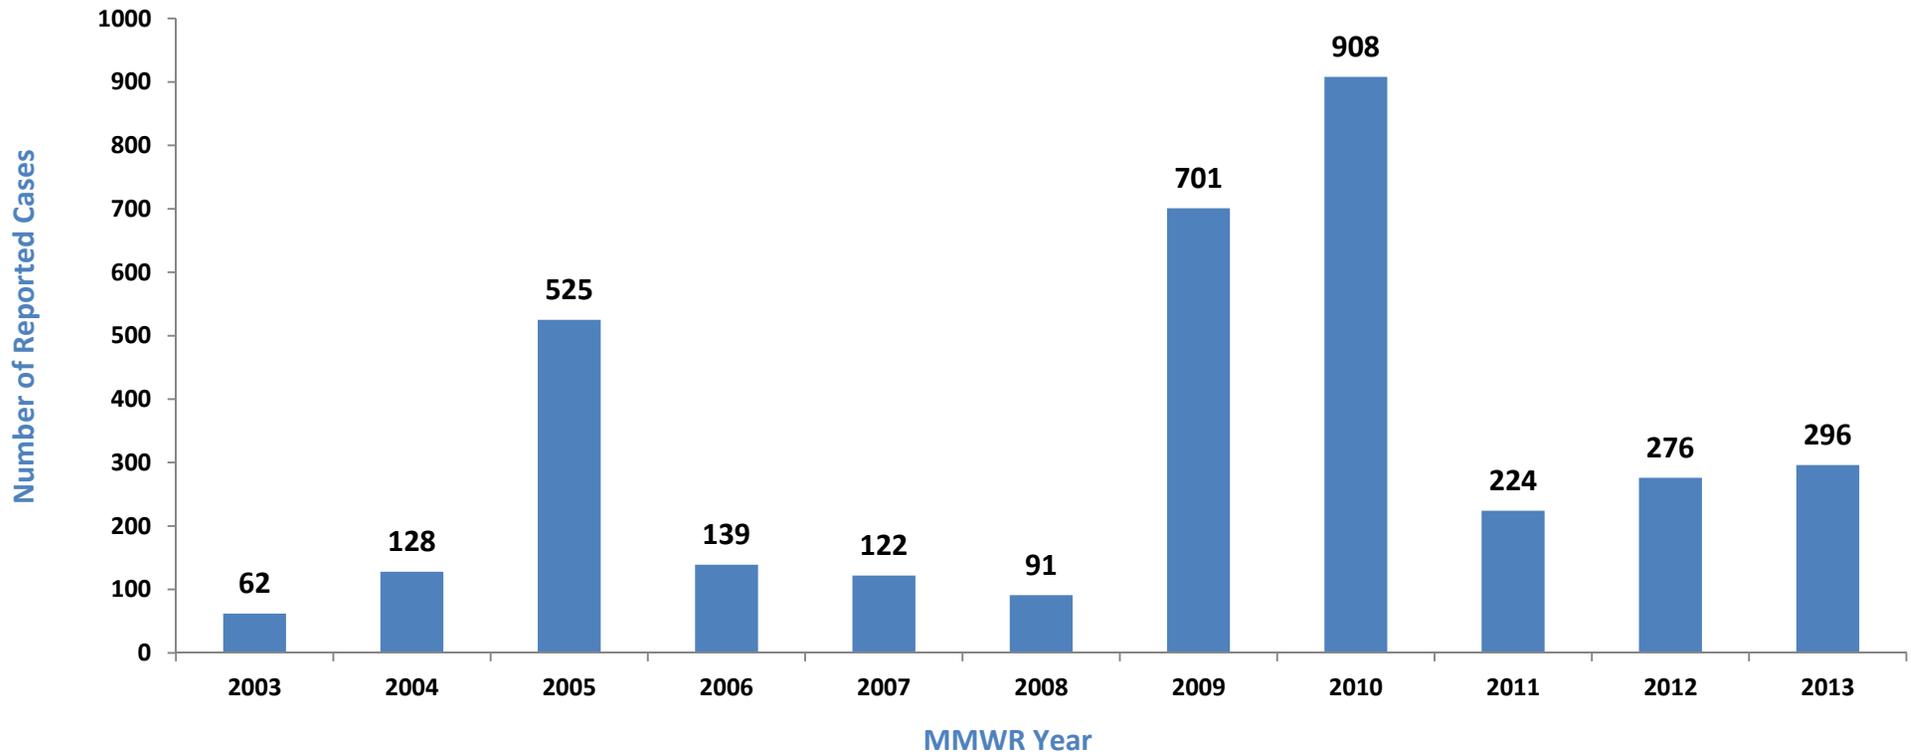

The number of Pertussis cases varies over time in Travis County (Figure 1). In 2009 and 2010, there was a definitive increase in the incidence of Pertussis in Travis County. Some of the increase resulted from advances in laboratory testing, the Pertussis case definition, and the process of case investigations. Since 2010, the Texas Department of State Health Services modified the Pertussis case definition and guidelines specific to case investigation. While there has been a recent overall decline in reported Pertussis cases in Travis County; it continues to be a public health concern. The majority of reported Pertussis cases correlate to the school year (Figure 3). Most reported cases of Pertussis occur in elementary age children and younger (Table 1). Public health is especially concerned with cases of Pertussis in young children, especially those under one year old. Approximately 65% of the cases reported for 2013 are eight years of age or less. The last reported Pertussis death in Travis County was in an infant in 2003.

Map 1. Travis County Reported Cases of Pertussis 2013^{1,2}

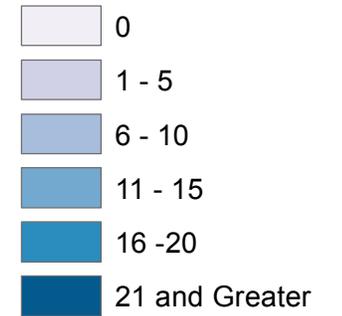

Data presented includes both confirmed and probable cases of Pertussis reported in Travis County. This map only includes cases in which investigations are complete, any pending reports and investigations for Pertussis are not included. All 2013 data are preliminary. Data in this map were generated on January 8, 2014.

Unable to map cases with Post Office Boxes. Four reported cases are not included in the map above.

This map does NOT reflect the location of where individuals acquired their infection. This is a map of the residence of the cases at the time of report.

This map has been produced by the Austin/Travis County Health and Human Services Department for the sole purpose of geographic reference. No warranty is made by the City of Austin regarding specific accuracy or completeness.

-
- ⁴ Travis County Population Estimates for 2003-2009 obtained from the Texas Department of State Health Services Center for Health Statistics and Travis County Population Projections for 2011-2012 obtained from the Texas State Data Center, Population Estimates and Projections Program using the 0.5 migration scenario. Travis County Population for 2010 obtained from Census 2010, from the U.S. Census Bureau.
- ⁵ Population Estimates and Population Projections are produced by different methods. If data are to be used in trend analysis, or other comparative treatments, unexpected results may be obtained if data from both estimated and projected series are used.
- ⁶ Data by month of report may not include all cases for that MMWR year. All data are pulled by MMWR year and not calendar year. As a result, there are some instances in which cases are reported with a MMWR year in one year but the actual report was received the following calendar year. Consequently, the annual totals may not equal the exact total number of cases when each month's totals are summed.
- ⁷ When the number of reported cases is less than 20, rates may not be considered reliable. Rate calculations for 2013 will be provided at the completion of the year.
