-
- ¹ Data provided for 2012 and 2013 are preliminary data. Data for 2012 was generated on February 13, 2013 and the data provided for 2013 was generated on October 9, 2013. Prior years of data are finalized.
 - ² Yearly data provided is based on MMWR year and not on calendar year.
 - ³ Rate per 100,000 population.
 - ⁴ Travis County Population Estimates for 2003-2009 and Travis County Population Projections for 2011-2012 obtained from the Texas Department of State Health Services Center for Health Statistics and the Texas State Data Center, Population Estimates and Projections Program. Travis County Population for 2010 obtained from Census 2010, from the U.S. Census Bureau.
 - ⁵ Population Estimates and Population Projections are produced by different methods. If data are to be used in trend analysis, or other comparative treatments, unexpected results may be obtained if data from both estimated and projected series are used.
 - ⁶ Data by month of report may not include all cases for that MMWR year. All data are pulled by MMWR year and not calendar year. As a result, there are some instances in which cases are reported with a MMWR year in one year but the actual report was received the following calendar year. Consequently, the annual totals may not equal the exact total number of cases when each month's totals are summed.
 - ⁷ When the number of reported cases is less than 20, rates may not be considered reliable. Rate calculations for 2013 will be provided at the completion of the year.
