

Deep Eddy Pool and Ground Improvements

Current Project Status:

The Austin Parks and Recreation Department with Chasco Contractors design team has collected input and stakeholder information through two (2) community meetings and is now preparing the schematic plan for Deep Eddy Pool. The proposed improvements include the resurfacing of the existing pool bottom, expanding the pool deck area and providing a beach entry at the western edge of the pool.

The design team is currently developing the design development plans prior to completing the construction drawings. If you missed the first meeting, you may view the presentation as prepared by the public consultant and provide feed back at [this link](#).
