ABOUT THIS PROJECT

PURPOSE / BACKGROUND

In November 2016, Austin voters approved the 2016 Mobility Bond which provided \$27.5 million for Safe Routes to School improvements. The funding will be equally allocated for school access-related projects in Austin's ten City Council districts.

To identify projects, the City of Austin hired consultants to evaluate and prioritize improvements to streets, trails, intersections and sidewalks around 130 elementary and middle schools in the City. The City also conducted a robust public engagement effort to inform recommendations, as described later in this report. The project is taking place over two years and was divided into phases based on the school calendar, with two to three council districts in each phase.

- **Phase 1: Fall 2017** – Council Districts 1 and 10, 29 schools
- **Phase 2: Spring 2018** – Council Districts 2, 8 and 9, 37 schools
- **Phase 3: Fall 2018** – Council Districts 3, 5 and 7, 35 schools
- **Phase 4: Spring 2019** – Council Districts 4 and 6, 30 schools

This report explains the process used to develop the recommendations for schools in City Council District 7, and presents a prioritized list of projects. It also presents a map and matrix showing all the recommendations made for each school. Recommended improvements aim to address identified safety or access issues for students walking and biking to school. **Ideas presented in this document are planning-level concepts: many projects will require further feasibility study and engineering evaluation before they can be implemented. In some locations, alternate approaches to address the issue may prove more feasible or more cost effective. Specific infrastructure treatments are defined and explained in the Austin SRTS Engineering Toolkit (Appendix A).**

SCHOOL AUDITS

School audits in District 7 took place the weeks of October 22 and October 29, 2018. Audit teams were led by a team of transportation planners and designers, as well as City of Austin staff from the Departments of Public Works and Transportation, and school representatives. School representatives typically included the principal or a designee and 1-2 parent representatives.

Most audits took place in the early morning, with a brief introductory meeting followed by an observation of school arrival. After the school bell rang, the team reconvened to

Walk Audit at Gullett Elementary School

Walk Audit at Pillow Elementary School

debrief and discuss next steps. Following the summary meeting, the consultants and City staff completed the assessment of walking and biking infrastructure around the school, focusing on a half-mile radius for pedestrian facility recommendations and up to a two-mile radius for bicycle facilities. The recommendations were reviewed by City staff for consistency with other planning efforts prior to prioritization.

PUBLIC ENGAGEMENT

In addition to participating in the school audits, members of the public were invited to provide input via an online map and at “pop-up” meetings at community events. Flyers explaining the project and promoting these opportunities were developed in English and Spanish, distributed to school contacts, and published on the City’s website and social media channels.

ONLINE INTERACTIVE MAP

The project team used an online interactive map to gather input from the community on the barriers to walking and biking to school. English and Spanish language versions of the online map went live in October 2018. Users could access the maps via links on the City’s Safe Routes to

School website. Using lines and points, wikimap users were asked to identify barriers, routes their family currently bikes or walks, and difficult routes for biking and walking.

Summary of Responses

Before adding their comments to the map, users were asked to complete a short survey to help understand their background, walking and bicycling habits, and place of residence. The following is a summary of demographic characteristics from respondents from District 7, as well as a map that shows the concentrations of comments made on the map.

Demographics

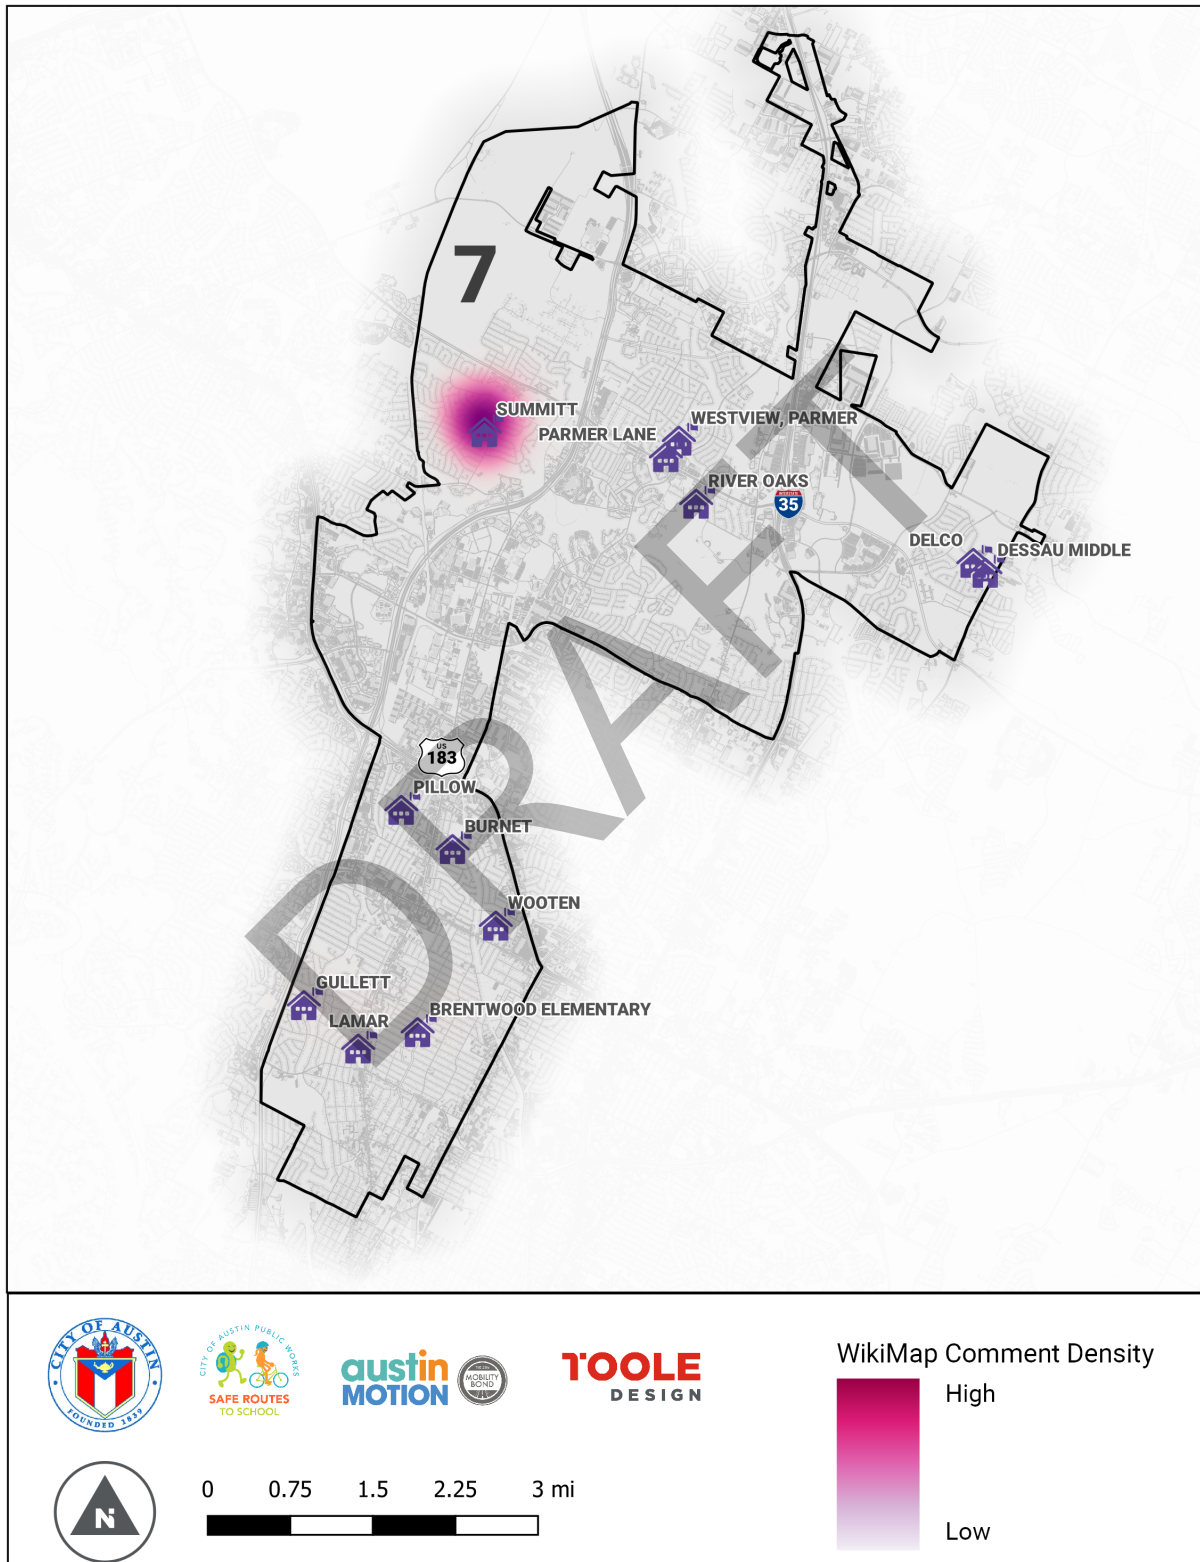

Demographics of Online Map Respondents, District 7

Bicycle Habits

- We are willing to ride in mixed traffic with automobiles on almost any type of street.
- We are willing to ride in traffic, but prefer dedicated bicycle lanes and routes.
- We do not ride bicycles and are unlikely to ever do so.
- We would like to bicycle more, but prefer not to ride in traffic.

Survey Responses from Online Map Respondents, District 7

“POP UP” MEETINGS

In fall 2018, the project team switched the approach to public outreach from project-specific Open Houses to “pop-up” meetings. For each “pop-up” meeting, members of the project team set up tables at school festivals, public libraries, and recreation centers with both electronic and paper maps for participants to provide their feedback. Comments received on the paper maps were added to the wikimap and incorporated into the infrastructure recommendations. Between October 19, 2018 and December 20, 2018, a total of 27 “pop-up” meetings were held with a total of 106 wikimap comments and 76 paper map comments received.

PRIORITIZATION

Information from the school audits, online map and open houses was combined to create a list of recommended projects around each school. Then, the projects were scored using a three-step process to create a prioritized list for each council district.

Step 1: Prioritize recommendations based on potential benefit.

To calculate the potential benefit, each project was evaluated on four factors: Stakeholder Input, Safety, Demand and Equity. Using available data, the following scoring system was used to calculate a Benefit Score for each proposed project.

$$\begin{aligned}
 &35\%: \text{Demand} \\
 &(\text{Schools within } \frac{1}{4} \text{ mile, Potential students served}) \\
 &+ \\
 &30\%: \text{Safety} \\
 &(\text{Crash data, Street type, Engineering judgment}) \\
 &+ \\
 &20\%: \text{Equity} \\
 &(\text{Free \& reduced lunch rate, Poverty rate}) \\
 &+ \\
 &15\%: \text{Stakeholder Input} \\
 &(\text{Public comments from Open Houses and WikiMap}) \\
 &= \\
 &100\%: \text{Final Benefit Score}
 \end{aligned}$$

Step 2: Adjust for existing conditions.

To further prioritize projects that would create new facilities and close gaps in the existing bicycle and pedestrian networks, the Benefit Score was divided in half for recommendations that improve existing facilities (as opposed to creating new connections/facilities).

Step 3: Calculate cost benefit score.

Planning-level cost estimates for each project were developed based on bid tabulations maintained by the City of Austin. The benefit score was divided by the estimated project cost, and results were sorted into five categories to represent Cost:Benefit - very high, high, med, low, very low.

Costs opinions are order-of-magnitude, planning-level estimates based on local bid tabulations for similar project

SFC Farmers Market

Summit Elementary Eagle Fest

types. Planning-level cost estimates do not take into consideration localized specifics of each project such as right-of-way acquisition, significant utility relocation, etc. They are useful for aggregate-level budget planning, but individual project cost estimates will change as projects advance through further study and design.

After further feasibility study and engineering evaluation, final project cost estimates will change before they can be implemented. In some locations, alternate approaches to address the issue may prove more feasible or more cost effective.

PRIORITIZATION SUMMARY

There are a total of 480 recommended projects in City Council District 7 with a total estimated cost of \$105.6 million. The combined costs for all projects in each Overall Benefit category are shown in the table below.

Costs are planning-level estimates that will be refined as projects advance through further study and design. They can be used to evaluate the order-of-magnitude of needs at an aggregate level.

Overall Benefit Category	Combined Project Costs
1 - Very High	\$59,000,000
2 - High	\$12,300,000
3 - Medium	\$13,800,000
4 - Low	\$10,300,000
5 - Very Low	\$10,200,000
District 7 Total	\$105,600,000

NEXT STEPS

Both Overall and Estimated Cost:Benefits will be used to prioritize improvements. However, to use the Safe Routes to School's limited resources most effectively, the program is also considering other factors to determine which projects will move forward as well as project implementation order. These factors include final cost estimates, feasibility, leveraging / cost-sharing opportunities, and more.

Generally, projects will be selected for implementation using the following guiding principles:

- 1) Implement Projects that have a High or Very High Overall Benefit and a High or Very High Estimated Cost:Benefit,
- 2) Make meaningful improvements for walking and bicycling near as many schools as possible,
- 3) For 2016 bond funding, per council direction, balance funding equally per council district,
- 4) Other available sources of funding will be leveraged to implement additional projects.

The City of Austin has already started examining the feasibility of recommendations and, in some cases, has initiated design/construction for certain projects. Go to AustinTexas.gov/SafeRoutes to learn more and get updates about upcoming Safe Routes to School projects in each City Council District.

CITY COUNCIL DISTRICT 7 RECOMMENDED SAFE ROUTES TO SCHOOL PROJECTS

The following pages present maps of all recommendations, followed by detailed tables that include the Benefit and Cost:Benefit category for each project. Each recommendation has a unique identification number, which can be cross-referenced between the maps and the tables. The unique project ID is a combination of the school group code (e.g., 1C) and the project number shown on the map (e.g., 001).

Ideas presented in this document are planning-level concepts: many projects will require further feasibility study and engineering evaluation before they can be implemented. In some locations, alternate approaches to address the issue may prove more feasible or more cost effective.

3J - 640	DELCO	E HOWARD LN / HARRIS	Difficult crossing	Add Leading Pedestrian Interval (LPI) , Install high visibility crosswalk [4] across all legs	1 - Very High	1 - Very High
3J - 641	WESTVIEW	METRIC BLVD /	Difficult crossing	Install Pedestrian Hybrid Beacon [1]	1 - Very High	1 - Very High
3J - 642	WESTVIEW	SCOFIELD FARMS DR / VISALIA LN	Difficult crossing	Add curb extensions [4] on Scofield Farms Dr , Install high visibility crosswalk [2] across Scofield Farms Dr	4 - Low	3 - Medium
3J - 643	WESTVIEW, RIVER OAKS, PARMER LANE	DAPPLEGRE Y LN / SCOFIELD	Difficult crossing	Add median refuge island	3 - Medium	2 - High

* Estimated Cost:Benefit rankings are preliminary, planning level-estimates to identify cost-effective options for addressing safety concerns. Estimated Cost:Benefit rankings are developed using planning level costs for projects of this nature. Individual project cost estimates will change as projects advance. See pages 4-5 of this report for more information about how the Safe Routes Program determines project prioritization and implementation.

INFRASTRUCTURE PLAN

Project ID	Schools within 1/2 mile * = no schools w/in 1/2 mile; closest school noted	Location	Issue	Recommendation + = parking removal required * = curb changes required ~ = private property acquisition required	Overall Benefit Category	Estimated Cost:Benefit Category
3J - 644	PARMER LANE, WESTVIEW, RIVER OAKS	METRIC BLVD / SCOFIELD LN	Difficult crossing	Add median refuge island on Metric Blvd , Lane reconfiguration	1 - Very High	1 - Very High
3J - 645	PARMER LANE, WESTVIEW	CARRIAGE PARK LN / LAMPLIGHT VILLAGE AVE	Difficult crossing	Add median refuge island on Lamplight Village Ave , Install high visibility crosswalk [1] across Lamplight Village Ave	3 - Medium	2 - High
3J - 646	RIVER OAKS	N LAMAR BLVD / WALNUT	Difficult crossing	Install high visibility crosswalk [1] across N Lamar Blvd , Install Pedestrian Hybrid Beacon [1]	3 - Medium	3 - Medium
3J - 801	WESTVIEW, PARMER LANE	Near 1805 SCOFIELD LN	Parking lot circulation issues	Study circulation or parking	4 - Low	2 - High
3J - 802	PARMER LANE, WESTVIEW	Near 1805 SCOFIELD LN	No bike parking	Add bike parking	5 - Very Low	4 - Low
3J - 805	DESSAU MIDDLE, DELCO	Near 1501 DESSAU RIDGE LN	Traffic patterns conflict with pedestrians on ISD property	Study circulation or parking	5 - Very Low	3 - Medium
3J - 806	RIVER OAKS	Near 1363 BRAIDED	No connection	Add gate	5 - Very Low	5 - Very Low
3J - 901	DELCO, DESSAU MIDDLE	Near 1620 WEATHERFO RD DR	No lighting a missing path where students walk	Add lighting , Construct new shared use path	1 - Very High	2 - High
