Heat from the sun causes water to evaporate. Water runs into rivers and lakes.

Underground formation containing water.

Water flows through porous rocks.

Water vapor forms clouds.

Clouds grow heavy and rain falls.

Collection: Water runs into rivers and lakes.

The Water Cycle

Condensation: Water vapor forms clouds.

Precipitation: Clouds grow heavy and rain falls.

Evaporation: Heat from the sun causes water to evaporate.

Permeable Rock: Water flows through porous rocks.

Aquifer: Underground formation containing water.
