

Pemberton Heights Water Rehabilitation Project- Phase 3

(Project ID #2231.146)

Project Update:

Final paving is scheduled for May 24- June 1, weather permitting. All infrastructure work has been completed except two tie- ins and a water meter connection at Gaston and Wooldridge. These are scheduled to be completed after pressure testing is done.

In most cases, construction signage will need to stay up until final paving and completion. The contractor will remove signage and clean the area when finished. All area outside of the right-of-way will also be restored to original condition before final completion.

Thank you for all of your patience and understanding as we have made these important improvements to your water, wastewater and storm sewer infrastructure. We will share additional updates as the project comes to a close.
